moon's far side using stolen American film. As the 1960s progressed, consider how the heck did people learn to steer a spacecraft using nothing but gravity. And just how were humans able to goose a spaceship through a thirty-year journey to the literal edge of our solar system. *Ambassadors from Earth* relates the story of the first unmanned space probes and planetary explorers from the Sputnik and Explorer satellites launched in the late 1950s to the thrilling interstellar Voyager missions of the 70s that yielded some of the most celebrated successes and spectacular failures of the space age. Keep in mind that our first mad scrambles to reach orbit, the moon, and the planets were littered with enough histrionics and cliffhanging turmoil to rival the most far-out sci-fi film. Utilizing original interviews with key players bolstered by never-before-seen photographs, journal excerpts, and primary source documents, Jay Gallentine delivers a quirky and unforgettable look at the lives and legacy of the Americans and Soviets who conceived, built, and guided those unmanned missions to the planets and beyond. Of special note is his in-depth interview with James Van Allen, the discoverer of the rings of planetary radiation that now bear his name. *Ambassadors from Earth* is an engaging bumper-car ride through a fog of head-banging uncertainty, bleeding-edge technology, personality clashes, organizational frustrations, brutal schedules, and the occasional bright spot. Confessed one participant: "We were making it up as we went along."

Food Science and Technology Oluwatosin Ademola Ijabadeniyi, 2023-11-06. *Food Science and Technology Fundamentals and Innovation* presents the aspects of microbiology, chemistry, nutrition, and process engineering required for the successful selection, preservation, processing, packaging, and distribution of quality food.
