By Vicky Jordan

Problem How long will it take for 100 atoms of the radioactive parent Carbon-14 to completely decay to the stable daughter isotope Nitrogen-14?

Background **Relative dating** gives an approximate age of something compared to some other event in history. Scientists can tell that the item is "older" or "younger" than certain events in time, but cannot give an exact age of the item. Relative dating is common when comparing layers of rocks in different regions, and figuring out which fossil is older by comparing the rock layers the fossils are in.

Absolute dating gives an actual date in history that the item was formed or died. The most common type of absolute dating for geologic material is _____. A rock containing a radioactive element can be dated by measuring how much of the element remains. Radiometric dating methods give absolute ages ranging from decades to billions of years. Radioactive elements are unstable and decay into other materials at a known, fixed rate through radioactive decay. Different radioactive elements have different rates of decay. Each radioactive isotope has a characteristic, fixed, half-life. The _____ is the amount of time it takes for half of the radioactive element to decay or change into another element. Half-lives of elements can range from microseconds to hundreds of billions of years, depending on the isotope.

Hypothesis _____

Procedure

1. Start with 100 pennies. Each penny represents an atom in the radioactive element Carbon-14.
2. Dump out all of the pennies and spread them out on the table.
3. Remove all the coins that show tails to the side. These are atoms that have "decayed" and are no longer radioactive.
4. Record the number of pennies with heads in the table below. These represent atoms that are still radioactive.
5. Put the pennies that had heads up back in the container, mix them, and spread them out on the table and repeat the above process until all the pennies are gone or until you have completed 15 trials.
6. Graph the data in your data chart on the graph provided on the back. Remember graphing rules!
7. Enter your data into the master spreadsheet to chart an all class average.

Checkpoint: Which data is more reliable: your own data or the class average? Explain why with a super sentence. _____
