Strategic Allocation of Resources Using Linear Programming Model with Parametric Analysis: in MATLAB and Excel Solver Dinesh Gupta, 2014-05-27 Since the late 1940s linear programming models have been used for many different purposes Airline companies apply these models to optimize their use of planes and staff

NASA has been using them for many years to optimize their use of limited resources Oil companies use them to optimize their refinery operations Small and medium sized businesses use linear programming to solve a huge variety of problems often involving resource allocation In my study a typical product mix problem in a manufacturing system producing two products each product consists of two sub assemblies is solved for its optimal solution through the use of the latest versions of MATLAB having the command `simlp` which is very much like `linprog` As analysts we try to find a good enough solution for the decision maker to make a final decision Our attempt is to give the mathematical description of the product mix optimization problem and bring the problem into a form ready to call MATLAB's `simlp` command The objective of this study is to find the best product mix that maximizes profit The graph obtained using MATLAB commands give the shaded area enclosed by the constraints called the feasible region which is the set of points satisfying all the constraints To find the optimal solution we look at the lines of equal profit to find the corner of the feasible region which yield the highest profit This corner can be found out at the farthest line of equal profit which still touches the feasible region The most critical part is the sensitivity analysis using Excel Solver and Parametric Analysis using computer software which allows us to study the effect on optimal solution due to discrete and continuous change in parameters of the LP model including to identify bottlenecks We have examined other options like product outsourcing one time cost cross training of one operator manufacturing of hypothetical third product on under utilized machines and optimal sequencing of jobs on machines

Modeling and Decision Analysis W/Excel Cliff T. Ragsdale,2000-07-01 [Risk Modeling for Appraising Named Peril Index Insurance Products](#) Shadreck Mapfumo,Huybert Groenendaal,Chloe Dugger,2017-04-13 Named peril index insurance has great potential to address unmet risk management needs for agricultural insurance in developing economies potentially contributing to increased agricultural sustainability and improved food security However the development and appraisal of index insurance business lines is not without challenges Insurers must rigorously evaluate the quality of the products they offer and take care to ensure that distributors and policyholders understand the benefits and limits of the purchased coverage Without these important steps to ensure responsible insurance practices insurers can damage the implementation and potential of index insurance in the market Risk Modeling for Appraising Named Peril Index Insurance Products A Guide for Practitioners helps stakeholders in the named peril index insurance industry appraise new and existing products Part 1 of the guide provides a summary of the insights and decisions required for the insurer to make an informed decision to launch and expand an index insurance business line Insurance managers are the primary audience for part 1 Part 2 provides a step by step guide to calculating the decision metrics used by the insurance manager in part 1 These metrics are calculated using probabilistic modeling that provides insights into risks related to the index insurance product Actuarial analysts are the primary audience for part 2 In an increasingly competitive insurance market creative product development and imaginative business strategies are becoming the norm This guide will help emerging market insurers who seek to stay on the cutting

edge to successfully and sustainably penetrate new market segments *Preventing Harmful Substance Use* Tim Stockwell, Paul Gruenewald, John Toumbourou, Wendy Loxley, 2005-09-27 The prevention of harm from drug use both legal and illegal is a major concern to government departments and clinicians throughout the world. Recently much new research has been conducted regarding global levels and patterns of drug related harm on common risk factors with other social problems e.g. mental health, crime and on the effectiveness of a wide range of intervention strategies. There is a need to summarise and synthesise this new knowledge for use in a range of disciplines. *Preventing Harmful Substance Use* offers the most comprehensive and up to date advice available on the prevention of drug and alcohol abuse. Contributors provide authoritative science based reviews of knowledge on their areas of expertise and make clear recommendations for the future of prevention policy and practice. A final section draws the work together and offers a framework for an integrated science of prevention.

Cost of Capital Shannon P. Pratt, Roger J. Grabowski, 2008-02-25 In this long awaited Third Edition of *Cost of Capital: Applications and Examples* renowned valuation experts and authors Shannon Pratt and Roger Grabowski address the most controversial issues and problems in estimating the cost of capital. This authoritative book makes a timely and significant contribution to the business valuation body of knowledge and is an essential part of the expert's library.
