Abstract. This paper presents a new approach to the problem of finding the optimal solution to a problem. The approach is based on the use of a new type of search tree, called a "branch and bound" tree. This tree is constructed by starting with a root node and then adding new nodes as needed. The nodes are labeled with the values of the objective function. The tree is searched in a breadth-first manner, and the optimal solution is found when a node is reached whose value is less than or equal to the value of the root node. This approach is shown to be more efficient than other methods for finding the optimal solution to a problem.

Raia Environment Design Guide:

Bioclimatic Housing Richard Hyde, 2012-04-27 In the search for sustainable architecture there is growing interest in the relationship between nature and design In this vital new book the term bioclimatic relating to the dynamic between climate and living organisms is applied by the authors in focusing on countries where housing requires cooling for a significant part of the year In this context Bioclimatic Housing covers creative vernacular architecture to present both the theory and practice of innovative low energy architecture The book interweaves the themes of social progress technological fixes and industry transformation within a discussion of global and country trends climate types solutions and technologies Prepared under the auspices of a 5 year International Energy Agency IEA project and with case studies from Iran Malaysia Australia Japan Sri Lanka and Italy this is a truly international and authoritative work providing an essential primer for building designers builders developers and advanced students in architecture and engineering *Positive Development*

Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of Positive Development in which the built environment provides greater life quality health amenity and safety for all without sacrificing resources or money With a different form of design development itself can become a sustainability solution A cornerstone of this new paradigm is the eco retrofitting of the vast urban fabric we already inhabit The author presents a revolutionary new tool called SmartMode to achieve this end This book challenges everyone working in or studying the areas of sustainable development planning architecture or the built environment to rethink their current ideas and practices Design for Sustainability Janis

Birkeland, 2012-05-04 With radical and innovative design solutions everyone could be living in buildings and settlements that are more like gardens than cargo containers and that purify air and water generate energy treat sewage and produce food at lower cost Birkeland introduces systems design thinking that cuts across academic and professional boundaries and the divide between social and physical sciences to move towards a transdisciplinary approach to environmental and social problem solving This sourcebook is useful for teaching as each topic within the field of environmental management and social change has pairs of short readings providing diverse perspectives to compare contrast and debate Design for Sustainability presents examples of integrated systems design based on ecological principles and concepts and drawn from the foremost designers in the fields of industrial design materials housing design urban planning and transport landscape and permaculture and energy and resource management *Architecture, City, Environment* Koen Steemers, Simos Yannas, 2000

PLEA is a network of individuals sharing expertise in the arts sciences planning and design of the built environment It serves as an international interdisciplinary forum to promote discourse on environmental quality in architecture and planning This 17th PLEA international conference addresses sustainable design with respect to architecture city and environment at the turn of the millennium The central aim of the conference is to explore the interrelationships and integration of architecture city and environment The Proceedings will be of interest to all those involved in bioclimatic design and the application of

natural and innovative techniques to architecture and planning The conference is organised by the Martin Centre for Architectural and Urban Studies University of Cambridge and the Cambridge Programme for Industry University of Cambridge

Building Ecology Peter Graham, 2009-02-12 Buildings consume 40% of our planet's materials and 30% of its energy Their construction uses up to three million tonnes of raw materials a year and generates 20% of the solid waste stream If we want to survive our urban future there is no option but to build in ways which improve the health of ecosystems Understanding the concept of ecological sustainability and translating it into practice as sustainable development is a key challenge for today's built environment professionals The skill and vision of those who shape our cities and homes is vital to achieving sustainable solutions to the many environmental economic and social problems we face on a local national and global scale Peter Graham offers here a holistic view of ecologically sustainable building by drawing on established areas of knowledge demonstrating their relevance to the environmentally conscious building professional and putting the process product and impact of building into context Case studies illustrate how sustainable principles have been applied successfully and discussion topics are offered to stimulate thought Building Ecology will help planners surveyors designers and builders to incorporate sustainability into their everyday practice by showing which styles of building are ecologically sustainable providing fundamental knowledge for making decisions using the principles of ecologically sustainable building explaining a complex subject in a clear balanced way Building Ecology sets out the current scientific view of how nature works and how buildings link with and affect nature It provides fundamental knowledge for building in harmony with nature and keeping Earth's life supporting ecosystems healthy

Sustainable Buildings in Practice George Baird, 2010-01-29 Current assessment methods of sustainable buildings do not adequately account for the users needs Given that over the life of a building total salary costs far outweigh both operating costs and combined capital and rental costs the occupants needs are not something which should be sensibly ignored This book presents an unbiased evaluation of thirty of the most cutting edge sustainable buildings in the world in terms of the users perceived comfort health and productivity The author has visited the buildings interviewed the design teams and examined the findings of a sixty question standardized user questionnaire The book provides thirty case studies covering mixed mode passive and environmentally sustainable commercial and institutional buildings detailed insights into the principles underlying the design of sustainable buildings worldwide over several climatic zones and eleven countries together with clear explanations and illustrations of innovative design practice a discussion of common issues and the lessons that may be learnt from a study of the performance of sustainable buildings in practice from the point of view of the people who use them This important book will be of great benefit to architects and engineers facility managers of commercial and institutional buildings as well as developers and researchers academics and students in these fields

A Carbon Primer for the Built Environment Simon Foxell,2014-01-03 In a world increasingly concerned about the impact of carbon dioxide and other greenhouse gases in the atmosphere on global climate the A Carbon Primer for the Built Environment will provide an understanding of the science and the public policy and regulation intended to tackle climate change It will spell out the essential information needed for navigating through the growing regulatory maze with confidence The book will Provide an explanation of climate change why carbon has been targeted as the main culprit and how this will impact the working lives of architects Explain key concepts such as carbon footprinting contraction convergence concentration based targets the Energy Performance of Buildings Directive

decarbonising supply and reducing energy demand as well as the relevance of relevant government targets and international agreements Suggest an overall framework for achieving the carbon reduction targets and the requirements that will place on building designers Outline requirements and common standards and codes providing guidance on compliance mechanisms Suggest and examine likely models for future practice The book will be essential reading for anyone wanting to familiarise themselves with the new landscape of carbon reduction in the built environment with a particular focus on building design It will also provide an accessible reference volume for information on particular policies terms and initiatives as well as key data and numbers that will assist initial carbon calculations

Circularity of Cementitious Materials Christian

Paglia,2025-08-18 Recycling of materials in building and infrastructure applications are global concerns driven by natural resource preservation needs of modernized countries and sustainable development of emerging countries This practical book explores the strategies necessary for successful recycling of cement based materials to achieve sustainable and long service life It investigates recycled cementitious materials to ensure decisive implementation and meet industry and societal challenges Presents the state of the art in recycling one of the most used materials in today s construction sector Covers construction and demolition waste and recycled concrete UHPC and road base material Aimed at readers in materials civil and construction engineering this book offers guidance to professionals and researchers developing strategies for sustainable application of cement based materials

The Environmental Brief Richard Hyde,Steve Watson,York St John Business

School Steve Watson,Wendy Cheshire,Mark Thomson,2007-01-24 The built environment is responsible for an estimated forty five per cent of all greenhouse gas emissions As the greatest opportunities for reducing these emissions occur during the briefing and design processes the pathway to better design lies in preparing environmental briefs and using these to drive building design and produce buildings of high environmental performance This process driven book looks at the theoretical issues involved in an environmental brief and outlines methods by which architects can approach the writing of a brief that considers all aspects of the natural and the built environment and relates these concepts to a number of case studies from around the world

Building Information Modelling (BIM) in Design, Construction and Operations II A. Galiano-Garrigos,L.

Mahdjoubi,C.A. Brebbia,2017-08-09 The papers presented at Building Information Modelling 2017 BIM are from a range of forums including plenary papers workshops seminars and panel sessions The conference was attended by experts from industry practice and academia sharing their work on key topics the development of innovative solutions and the identification future trends The volume gives details of how BIM tools and techniques have fundamentally altered the manner in which modern construction teams operate the processes through which designs are evolved and the relationships between conceptual detail construction and life cycle stages BIM is essentially value creating collaboration throughout the entire life cycle of an asset underpinned by the statistics attached to them and has far and reaching consequences on both building procurement and infrastructure BIM 2017 papers cover topics such as BIM in design coordination Construction operations

 management Design and Construction Rick Best, Gerard de Valence, 2007-06-01 The design and construction of buildings
 is a lengthy and expensive process and those who commission buildings are continually looking for ways to improve the
 efficiency of the process In this book the second in the Building in Value series a broad range of topics related to the
 processes of design and construction are explored by an international group of experts The overall aim of the book is to look
 at ways that clients can improve the value for money outcomes of their decisions to construct buildings The book is aimed at
 students studying in many areas related to the construction industry including architecture construction management civil
 engineering and quantity surveying and should also be of interest to many in the industry including project managers

 Although many designers have succeeded in applying ecological or green design principles to architecture on the small scale
 city centers remain an uncharted frontier when it comes to achieving integrated ecologically responsive buildings Architect
 Ken Yeang takes us an important step forward by addressing the challenge of making the skyscraper an intensive large
 building type sustainable that is a structure that has a beneficial impact on the natural environment and increases energy
 efficiency in the core Yeang s premise is that the skyscraper is a built form that will stay with society well into the future and
 that its worldwide popularity is a reason in itself to rethink its relationship to the environment The Green Skyscraper
 presents a general framework for looking at ecological design a step by step guide to examining the fundamental premises of
 such an approach as well as its practical applications to the contemporary skyscraper Issues discussed include the use of
 energy and materials and their physical impact on the ecosystem illustrated with case studies from Yeang s own projects
