The Invention of God in Indigenous Societies James Cox,2014-09-19 Indigenous societies around the world have been historically disparaged by European explorers colonial officials and Christian missionaries Nowhere was this more evident than in early descriptions of indigenous religions as savage primitive superstitious and fetishistic Liberal intellectuals both indigenous and colonial reacted to this by claiming that before indigenous peoples ever encountered Europeans they all believed in a Supreme Being The Invention of God in Indigenous Societies argues that by alleging that God can be located at the core of pre Christian cultures this claim effectively invents a tradition which only makes sense theologically if God has never left himself without a witness Examining a range of indigenous religions from North America Africa and Australasia the Shona of Zimbabwe the Rainbow Spirit Theology in Australia the Yupiit of Alaska and the M ori of New Zealand the book argues that the interests of indigenous societies are best served by carefully describing their religious beliefs and practices using historical and phenomenological methods just as would be done in the study of any world religion

Ecologies of Bronze Age Rock Art Fredrik Fahlander, 2024-07-15 A consideration of the rock art of the Mälaren bay region exploring the potential efficacy of petroglyphs as physical devices through organization design and articulation The Bronze Age 1700 500 BCE petroglyphs of southern Scandinavia comprise a unique tradition of rock art in northern Eurasia Despite a limited repertoire of motifs such as cupmarks boats anthropomorphs zoomorphs podomorphs and circles it shows great variability in design elaboration and articulation This book is a study of the Mälaren region in southern central Sweden that includes one of the most prominent rock art clusters of southwest Uppland as well as the hinterland of Södermanland county The rock art in this region is studied on three scales regional local and particular This allows for comparisons between dense and small sites an exploration of how the Bronze Age rock art tradition developed over time in the area and equally how the design and articulation of certain motifs relate to contemporary settlements waterways and varying environmental settings Patterns and structures in the distribution and articulation of the petroglyphs show that the different motifs are not only visual expressions but very much material enactments The motifs often physically relate to each other the flows of water and the microtopography and mineral contents of the rocks The study is therefore not as much about rock art as images and symbols as it is about the ecology of rock art the web of social and physical relations in which it was enacted and employed From this perspective the petroglyphs are seen as petrofacts that is something akin to tools or devices articulated in various ways to affect humans other than humans and the animacies of the coastal milieu where they were made
