DIMNP Calculations for the Fusion Code Benchmark Using the Ecart Computer Code Sandro Paci, 2000

Codes and Algebraic Curves Oliver Pretzel, 1998-01-08 The geometry of curves has fascinated mathematicians for 2500 years and the theory has become highly abstract Recently links have been made with the subject of error correction leading to the creation of geometric Goppa codes a new and important area of coding theory This book is an updated and extended version of the last part of the successful book Error Correcting Codes and Finite Fields It provides an elementary introduction to Goppa codes and includes many examples calculations and applications The book is in two parts with an emphasis on motivation and applications of the theory take precedence over proofs of theorems The formal theory is however provided in the second part of the book and several of the concepts and proofs have been simplified without sacrificing rigour

Advances in Algebraic Geometry Codes Edgar Martinez-Moro, 2008 Advances in Algebraic Geometry Codes presents the most successful applications of algebraic geometry to the field of error correcting codes which are used in the industry when one sends information through a noisy channel The noise in a channel is the corruption of a part of the information due to

either interferences in the telecommunications or degradation of the information storing support for instance compact disc. An error correcting code thus adds extra information to the message to be transmitted with the aim of recovering the sent information. With contributions from renowned researchers this pioneering book will be of value to mathematicians, computer scientists and engineers in information theory.

Verification of Codes and Calculations Patrick J. Roache, 1995

Accuracy of HEMP Code Solutions, 1973

Results of HEMP code calculations of simple problems are compared with exact results to determine the accuracy with which this numerical technique solves initial boundary value problems. More complicated problems of metal liners accelerated by explosives were also calculated with this code and these results were compared with experimental results to determine how well the code simulates these physical processes. It is concluded that HEMP calculations are accurate enough to be useful as a tool for predicting the gross motion of metals accelerated by detonating explosives.
