

Guide to Selection of Differential Scanning Calorimetry (DSC) Sample Pans

Thermal Analysis

DSC measurement requires that samples are enclosed in a sample pan in order to avoid the direct contact between sample and furnace and/or sensor, because if the samples come into contact with the furnace/sensor problems can occur on the baseline. Memory can be affected and damage to the furnace/sensor can occur (in the worst case the furnace/sensor can be destroyed).

All of our DSC (DSC 4000/6000/8000/8500) include a pack of 100 standard sample pans in aluminum (N5390123), but many other different sample pans are available in different shapes and in different materials to handle any kind of samples and for all possible measurements. What follows is some advice on how to select the proper sample pan.
