English with pre primary children **Africa's Energy Transition** George Anachebe Nwangwu, 2025-08-20 This book examines the critical challenges and opportunities surrounding climate change and the energy transition in Africa. While many Africans prioritize pressing concerns such as food scarcity, economic development, and unemployment, the book argues that the continent remains particularly vulnerable to climate-related impacts. Erratic weather patterns and extreme events exacerbate existing issues, including declining agricultural productivity, infrastructure damage, and political instability. Despite these challenges, the transition from fossil fuels to renewable energy presents significant economic opportunities for Africa. The book emphasizes that embracing this shift can help African countries transform their economies and strengthen resilience against climate change. It contends that the current international framework, where Africa has largely anchored its demands around climate justice, has yielded little tangible benefit for Africans. Instead, the book advocates for a shift in perspective rather than focusing solely on historical emissions from the Global North. African nations should recognize the potential advantages of actively participating in the global energy economy. By seizing the opportunities inherent in this transition, African countries can reshape their economies and capitalize on emerging energy markets.
