What is the periodic table?

The **periodic table** places each element on a chart based on its chemical and physical properties. Each box of the periodic table lists information about the atoms that make up an element. You can see:

- the name of the element
- the chemical symbol of the element
- the **atomic number** of the element—the number of protons in the nucleus of each one of its atoms
- the **average atomic mass** of the element—the weighted average of the masses of the atoms of an element
- the **ion charge** (or charges) of the element—the electric charge of its atoms when they gain or lose electrons. If the atoms can gain or lose electrons in more than one way, they will have a **multiple ion charge**.
