

Ch. 6 - Covalent Bonding

Section 6.1 - Formation of Covalent Bonds

- Electrons being attracted to two nuclei at the same time - covalent bonding
 - Then electrons are shared between the two nuclei making the molecules more stable
- If bond length is too far apart - the attractive forces are too small and results in no bond
- If bond lengths are too close - the repulsive forces are too large and push the atoms apart and results in no bond
- Optimal separation is when energy is at its lowest
- Every bond has a predicted length adhered from the atomic radii
- Want to be the most stable (completely made across the periodic table achieving noble gas status, $ns^2 np^6$)
 - octet rule - achieving 8 valence electrons
- Only electrons that can be shared is valence electron
 - - bold dash represents covalent bonds

Section 6.2 - Lewis Structures

- Number of electrons in lewis structure shows the total number of valence electrons in the atoms of a molecule
 - Octet (noble gas - 8 valence electrons)
 - Duet (add two electrons)

Advances in Carbohydrate Chemistry and Biochemistry, 1989-02-01 *Advances in Carbohydrate Chemistry and Biochemistry* **Dissertation Abstracts International**, 2006 **Magnetic Interactions and Spin Transport** Almadena Chtchelkanova, Stuart A. Wolf, Yves Idzerda, 2013-11-11 Stuart Wolf This book originated as a series of lectures that were given as part of a Summer School on Spintronics in the end of August 1998 at Lake Tahoe Nevada It has taken some time to get these lectures in a form suitable for this book and so the process has been an iterative one to provide current information on the topics that are covered There are some topics that have developed in the intervening years and we have tried to at least alert the readers to them in the Introduction where a rather complete set of references is provided to the current state of the art The field of magnetism once thought to be dead or dying has seen a remarkable rebirth in the last decade and promises to get even more important as we enter the new millennium This rebirth is due to some very new insight into how the spin degree of freedom of both electrons and nucleons can play a role in a new type of electronics that utilizes the spin in addition to or in place of the charge For this new field to mature and prosper it is important that students and postdoctoral fellows have access to the appropriate literature that can give them a sound basis in the fundamentals of this new field and I hope that this book is a very good start in this direction **Investigation of Cryogenic Hydrogen Storage with High Surface Area Carbon** Monterey Rio Gardiner, 2004 *A Collection of Articles on Physics and Others* Jin Tong Wang Ph. D, 2022-08-14 This book is about Dr Jin Tong Wang's collected research works included 1 Brillouin Small Angle Right Angle and Backscattering There were achieved three significances a smallest angle scattering in the world at that time It was a world record b discovered from small angle right angle and backscattering results the sound velocity was not a constant with the same phonon mode It actually depends on the phonon frequencies At that time no one in this field didn't know how to interpret it Based on the results in the study published a paper in Physical Review B in 1986 2 By the support of Office of Naval Research we created quite a few navel Ferro piezoelectric materials We have done experiments on ferroelectricity piezoelectricity and pyroelectricity measurements Based on the experiment we have some intriguing findings 3 We also work on theories on several topics First of all we proposed a displacive order disorder DOD ferroelectric transition model for para ferroelectric phase transition mechanism The paper was published in the well known European journal Ferroelectrics The DOD phase transition mechanism clarified the long time dispute whether the para ferroelectric phase transition was displacive or order disorder one 4 Derived an Accurate Formulation of Faraday Magnetic Circular Dichroism MCD and Kerr Effect of Light in Ferro electromagnet 5 published several papers in the frontier of quantum mechanics including the red shift of photon frequency in gravitational potential the mechanism of electron photo emission the unification of classical mechanics and quantum mechanics the origin of quantum particle entanglement and quantum wave packet tunneling Some papers have caught attentions by physics communities 5 two patents created by author One is microwave plasma and plasma
