Particle Dynamics with Aggregation and Fragmentation Culbert B. Laney,2025-04-16

Particle dynamics with aggregation and fragmentation occurs in almost every branch of science and engineering Examples include the formation of stars and planets in astrophysics the formation of colloids and polymers in chemistry the formation of raindrops and snowflakes in meteorology the formation of fuel sprays in mechanical engineering impact damage to aircraft and satellites in aerospace engineering and drilling and blasting in civil and mining engineering This is one of the first textbooks to give particle dynamics with aggregation and fragmentation a full treatment putting it on an equal footing with fluid dynamics and solid mechanics To help readers understand the connections to fluid dynamics this book shows how particle dynamics occurs in ideal gases granular gases and fluid turbulence Instead of relying on empirical results that apply only under specific circumstances the book uses broad physical principles such as conservation of mass momentum and energy The text draws on rigorous mathematical theory and modern high performance computing while avoiding the complex details The book also provides extensive references for those readers who need them While intended for a graduate level audience the book is written in a graphically rich style which will be accessible to advanced undergraduates In particular it includes over 100 figures and over 200 examples most of which are placed into grey boxes to avoid interrupting the main text While surveying the relevant research literature this book also draws on the author s unique insights into particle aggregation and fragmentation gained from participating in relevant research and development activities in industry and academia for over 25 years

Monitoring, Control and Effects of Air Pollution Andrzej Chmielewski,2011-08-23 The book addresses the subjects related to the selected aspects of pollutants emission monitoring and their effects The most of recent publications concentrated on the review of the pollutants emissions from industry especially power sector In this one emissions from opencast mining and transport are addressed as well Beside of SO_x and NO_x emissions small particles and other pollutants e g VOC ammonia have adverse effect on environment and human being The natural emissions e g from volcanoes has contribution to the pollutants concentration and atmospheric chemistry governs speciation of pollutants as in the case of secondary acidification The methods of ambient air pollution monitoring based on modern instrumentation allow the verification of dispersion models and balancing of mass emissions The comfort of everyday human s activity is influenced by

indoor and public transport vehicles interior air contamination which is effected even by the professional appliances operation The outdoor pollution leads to cultural heritage objects deterioration the mechanism are studied and the methods of rehabilitation developed However to prevent emissions the new technologies are being developed the new class of these technologies are plasma processes which are briefly reviewed at the final part of the book

Sources and Composition of Ambient Particulate Matter Manousos-Ioannis Manousakas,2021-09-10 Research related to ambient particulate matter PM remains very relevant today due to the adverse effects that PM have on human health PM are pollutants with varying chemical compositions and may originate from multiple emission sources which directly affects their toxicity To formulate effective control and mitigation strategies it is necessary to identify PM sources and to estimate their influence on ambient PM concentration a process that is known as source apportionment SA Depending on the geographical location and characteristics of an area many anthropogenic and natural sources may contribute to PM concentration levels such as dust resuspension sea salt traffic secondary aerosol formation industrial emissions ship emissions biomass burning power plant emissions etc Different methodological approaches have been used over the years to study the aforementioned topics but some scientific challenges remain mainly related to the following subjects real time chemical analysis and SA uncertainty estimation of SA results and analytical optimization for PM samples Additionally there are areas in the world for which the results regarding composition and sources of PM are still scarce The objective of this collection was to include studies on all aspects of PM chemical characterization and source apportionment regarding the inorganic and or organic fractions of PM
