Nuclear Medicine in Clinical Oncology Cuno Winkler,2012-12-06 The introduction of nuclear medicine into oncology dates back to the early 1940s when Lawrence reported on the tumor retention of ^{32}P phosphate von Hevesy and von Euler soon afterwards published their fundamental work on the metabolism of phosphorus in sarcoma cells and when almost at the same time Keston and his coworkers described their observation of the accumulation of radioactive iodine in metastases of a thyroid carcinoma Since that time innumerable publications have appeared in oncologic literature which deal with the application of nuclear medical methods in experimental cancer research and also in the diagnosis and treatment of malignant tumors The significance of some originally very successfully applied clinical methods naturally has changed over the years For instance scintigraphy became somewhat less important for the purely morphologic assessment of certain tumors after the introduction of transmission computerized tomography and modern sonographic methods into clinical practice On the other hand however it has also been possible to further develop scintigraphy to a decisive extent both with reference to the test substances applied and in view of the instrumentation As far as the scintigraphic equipment is concerned the introduction of static and sequential digital imaging by means of scintillation camera computer systems in the mid 1960s represents important progress as does the recent development of emission computerized tomography with single photon and positron emitters
