

Counseling and Restatement of Expectations	Counseling and Restatement of Expectations Counseling by the immediate supervisor is the initial step to mentor or coach performance. <ul style="list-style-type: none"> • Meet with the staff member and affirm expectations regarding performance. • Discuss the performance deficit or behavioral concern. • Provide a timeline and resources for improvement. • Report consequences for no improvement. • Document for an anecdotal file.
Written Reprimand	Written Reprimand At this time, the immediate supervisor may want to consult a Human Resources representative. After an investigation, follow the procedure outlined above for the counseling process, with the exception of providing documentation to the employee in a letter of reprimand. The letter should outline previous informal efforts and the current problem. Send copies of the signed letter to the department personnel file, proper University authority, and the respective Union, if applicable.
Short Suspension (or Equivalent)* Long Suspension (or Equivalent)*	Suspension or Equivalent Fully investigate the concern, followed by discussion with the employee. Summarize previous progressive discipline and the current problem, and specify the timeframe for suspension in writing. Identify further discipline and possible termination as a potential consequence for not meeting and maintaining standards for improvement. Provide copies as for the written reprimand.
Termination	Termination Termination may be necessary when discipline is not successful in improving performance. Review the work history and record of progressive discipline with proper University authority. Schedule a final meeting with the employee and conduct a meeting at which a letter of termination is provided. If necessary, the termination notice may be sent via certified mail. Provide copies as for previous disciplinary measures.

Therapy Theory in Practice Gail Boniface, Alison Seymour, 2012-03-26. Competence in any profession depends upon an understanding of the theory that underlies it. This concise and practical text for students and practitioners bridges the gap between occupational therapy theory and clinical practice, offering highly practical advice on using theory in practice in a wide range of settings. It considers the nature of professional practice and the need for a sound theoretical basis from which to plan, implement, and justify interventions, and investigates the practical use of occupational therapy theory and the issues such use raises in health and social care settings from a European perspective. Every occupational therapy student worldwide needs to know about the underlying theory of their profession and its application to practice. The book particularly debates the nature of the theory of occupational therapy via the introduction of the concept of models of the profession as an umbrella for practice, all of which is brought to life via case studies, incorporating expert advice, reflection exercises, and assessment and evaluation forms. **Psychosocial Conceptual Practice Models in Occupational Therapy** Moses N.

Keeping track of time Birgitta Wennberg, 2019-11-19 The overall aim of this thesis was to investigate daily time management DTM and time related interventions aiming to enhance participation in everyday activities among school age children and young adults with neurodevelopmental disorders In study I experiences of participation when using time assistive devices TADs in daily activities were investigated from the perspective of young adults aged 17-37 with intellectual disabilities ID n 9 using semi structured interviews In studies II and IV a new multimodal time related intervention consisting of psychoeducation compensation with TADs and time skills training was investigated in children aged 9-15 with attention deficit hyperactivity disorder ADHD Study II was a randomized controlled trial RCT with an intervention group n 19 and a control group n 19 The aim of study III was to describe DTM time processing ability TPA and self rated autonomy in children aged 9-15 with ADHD n 47 compared to children with ID n 47 and typically developing TD children n 47 In study IV occupational performance and satisfaction were evaluated n 27 In studies II III and IV a source for data collection included assessment proxy report and self reports Using TADs study I increased participation in activities in all areas of daily life self care activities at work or school and leisure time activities A feeling of having more control led to health benefits Participants described participation restrictions related to attitudes from their social network towards participation and attitudes towards the use of TADs from the individuals themselves Study II showed that the children in the intervention group increased their TPA significantly more compared to the control group mostly in terms of time orientation The parents in the intervention

group rated their children's DTM as significantly more improved compared to the parents of the children in the control group. However, according to the children themselves, there was no statistically significant improvement in their DTM. The psychoeducation for parents and school staff did not increase children's TPA and DTM on its own. The majority of parents and children in study IV rated the children's occupational performance and satisfaction significantly higher at follow-up than at baseline. In general, children rated their occupational performance and satisfaction higher than their parents did. Most goals decided by the children and their parents involved daily routines and time orientation. Study III showed that children with ADHD and children with ID had significantly lower TPA, DTM, and autonomy compared to TD children. Children with ADHD showed higher levels of self-rated autonomy compared to children with ID, but the reverse was found in DTM. However, there was significant diversity among children with ADHD and children with ID, which was not explained by age. Some children had difficulties at every level of TPA, while others were skilled at every level. The level of self-rated autonomy followed the level of TPA. In conclusion, this thesis revealed that children with ADHD and ID have the same overall pattern of TPA but may have a delayed TPA, which affects their DTM and autonomy and thereby also influences their participation in daily activities. The results show that a multimodal time-related intervention using TADs and time skills training could increase TPA and DTM in children with ADHD aged 9-15 years with time deficits. Experiences from young adults with ID also show increased participation in daily activities and health benefits using TADs. It is recommended that TPA and DTM should be measured to identify difficulties in TPA and DTM in children with ADHD and to offer tailored time-related interventions in addition to medication.

Introduction to Occupational Therapy- E-Book Jane Clifford O'Brien, 2011-11-01. A complete overview of the profession and the practice of occupational therapy. *Introduction to Occupational Therapy* 4th Edition prepares you for the roles, responsibilities, and relationships of the OT practitioner. This edition incorporates the latest revisions of the Occupational Therapy Practice Framework, which defines the OT process and areas of concern. Discussions also include treatment settings, occupational therapy across the lifespan, and evaluation, intervention, and outcomes within the OT process. Written by OT expert Jane Clifford O'Brien, this edition also keeps you current with emerging topics such as working with culturally diverse patients, evidence-based practice, and new practice areas such as driving and obesity.
