Astrophysical Concepts Martin Harwit,2012-12-06 Twenty five years have passed since the first edition of *Astrophysical Concepts* appeared During this time astrophysics has undergone major revolutions We have gained new perspectives on the Universe with the aid of powerful gamma ray X ray and infrared telescopes whose sensitivities could not have been imagined a quarter century earlier We have become expert at snaring neutrinos to gain insight on nuclear processes at work in the Sun and supernovae We have direct evidence for the existence of neutron stars and gravitational waves and persuasive arguments for the detection of black holes on scales of individual stars as well as galactic nuclei With so much that is new and so many new problems revealed by knowledge already gained almost all parts of this book had to be reconsidered and rewritten In the second edition which appeared ten years ago I had only added a chapter on the formation of galaxies stars and planets For this third edition such piecemeal measures no longer seemed appropriate Much of the book has been completely revised My principal aim in this third edition as before was to present a wide range of astrophysical topics in sufficient depth to give the reader a general quantitative understanding of the subject The book outlines cosmic events but does not portray them in detail it provides a series of astrophysical sketches I think this approach still befits the prevailing uncertainties and rapidly evolving views in astrophysics
