

1. Answer the questions below on the basis of your experience with charges and magnets.

a. Based on your experience with *electric field lines*:

- how should the *direction* of the magnetic field at every point be related to the *magnetic field lines*?
- how should the *strength* of the magnetic field at every point be reflected in the *magnetic field lines*?

b. Carefully draw the *magnetic field lines* for the bar magnet shown below. Be sure to draw the field lines so that they include information about the *strength* and *direction* of the field both inside and outside the magnet.

c. Based on the magnetic field lines you have drawn, rank the magnitude of the magnetic field at points A–E.

2. Two identical magnets are placed as shown. Using different colored pens sketch the approximate magnetic field vectors at the four labeled points for:

- just the horizontal top magnet,
- just the vertical bottom magnet, and
- when both are present.

Explain how you determined the field vectors for the case when both magnets are present.

, Force-free Magnetic Fields: Solutions, Topology And Applications Gerald E Marsh, 1996-01-31 After an introductory chapter concerned with the history of force free magnetic fields and the relation of such fields to hydrodynamics and astrophysics the book examines the limits imposed by the virial theorem for finite force free configurations Various techniques are then used to find solutions to the field equations The fact that the field lines corresponding to these solutions have the common feature of being twisted and may be knotted motivates a discussion of field line topology and the concept of helicity The topics of field topology helicity and magnetic energy in multiply connected domains make the book of interest to a rather wide audience Applications to solar prominence models type II superconductors and force reduced magnets are also discussed The book contains many figures and a wealth of material not readily available elsewhere Elementary manual of magnetism and electricity Andrew Jamieson, 1890 **Technical Electricity** Henry Thomas Davidge, Robert William Hutchinson, 1912 **Electrical Circuit Theory and Technology** John Bird, 2017-04-07 A fully comprehensive text for courses in electrical principles circuit theory and electrical technology providing 800 worked examples and over 1 350 further problems for students to work through at their own pace This book is ideal for students studying engineering for the first time as part of BTEC National and other pre degree vocational courses as well as Higher Nationals Foundation Degrees and first year undergraduate modules **First stage mechanics** Fabian Rosenberg, 1909 **A System of Electrotherapeutics: Direct currents.
