Other species are represented in the literary education canon including farmed animals. Yet the animals are typically anthropomorphized to guide students toward humanist readings and away from consideration of animals' experiences or subjectivities. This reproduces the idea that animals are mere objects meant to be exploited for human purposes even metaphorical and educational ones. John Drew develops the term *anthropo allegory* to capture and critique the process through which students are taught to read animal literary representations exclusively as symbolic analogues for humans and human themes. The concept serves as an analytical lens for critically interrogating significant texts taught across educational levels and exposing the deeply engrained educational anthropocentrism that silences animal issues even when animals are represented. Crucially, Drew identifies texts and pedagogical strategies that can help cultivate a literary educational animal ethic that simultaneously encourages analytical rigour and multispecies concern *Animal Characters* Bruce Thomas Boehrer, 2011-06-29 During the Renaissance, horses long considered the privileged even sentient companions of knights errant gradually lost their special place on the field of battle and with it their distinctive status in the world of chivalric heroism. Parrots, once the miraculous articulate companions of popes and emperors, declined into figures of mindless mimicry. Cats, which were tortured by Catholics in the Middle Ages, were tortured in the Reformation as part of the Protestant attack on Catholicism. And sheep, the model for *Agnus Dei* imagery, underwent transformations at once legal, material and spiritual as a result of their changing role in Europe's growing manufacturing and trade economies. While in the Middle Ages these nonhumans were endowed with privileged social associations, personal agency, even the ability to reason and speak, in the early modern period they lost these qualities at the very same time that a new emphasis on and understanding of human character was developing in European literature. In *Animal Characters*, Bruce Thomas Boehrer follows five species: the horse, the parrot, the cat, the turkey and the sheep through their appearances in an eclectic mix of texts from romances and poetry to cookbooks and natural histories. He shows how dramatic changes in animal character types between 1400 and 1700 relate to the emerging economy and culture of the

European Renaissance In early modern European culture animals not only served humans as sources of labor companionship clothing and food these nonhuman creatures helped to form an understanding of personhood Incorporating readings of Shakespeare s plays Milton s Paradise Lost Margaret Cavendish s Blazing World and other works Boehrer s series of animal character studies illuminates a fascinating period of change in interspecies relationships

Estimating Animal Abundance D.L. Borchers,Stephen T. Buckland,Walter Zucchini,2013-03-09 We hope this book will make the bewildering variety of methods for estimating the abundance of animal populations more accessible to the uninitiated and more coherent to the cogniscenti We have tried to emphasize the fundamental similarity of many methods and to draw out the common threads that underlie them With the exception of Chapter 13 we restrict ourselves to closed populations those that do not change in composition over the periods being considered Open population methods are in many ways simply extensions of closed population methods and we have tried to provide the reader with a foundation on which understanding of both closed and open population methods can develop We would like to thank Miguel Bernal for providing the St Andrews example dataset used frequently in the book Miguel Bernal and Jeff Laake for commenting on drafts of the book Jeff Laake for providing Figure 10.1 NRC Research Press for allowing us to use Figures 10

Livestock and Literature Liza B. Bauer, 2024-08-08 This book explores the past and current traces that cows pigs chickens and other animals used by humans have left in Anglophone literary fiction In times of accelerated global warming an acute pandemic and breakthroughs in bioengineering practices discussions on how to rethink the relationships to these animals have become as heated as perhaps never before *Livestock and Literature* examines what literature has to contribute to these debates In particular it draws on counter narratives to so called livestock animals commodification in selected science and speculative fiction SF works from the twenty first century These texts imagine what if scenarios where livestock practice resistance transform into biotechnologically modified postanimal beings or live in close companionship to humans Via these three points of access the study delineates the formal and thematic strategies SF authors apply to challenge anthropocentric and speciesist thought patterns The aim is to shed light on how these alternative storyworlds expand readers understanding of the lives of farmed animals seeking insight into how literature shapes human animal relationships beyond the page

On the Learning of Chinese , 2010-01-01 Although more people speak

Chinese than any other language on Earth proficiency in Chinese is largely confined to the people who live in or adjacent to the Chinese Mainland and Taiwan and to the ethnic Chinese inhabitants of the various Chinatowns in countries around the world Despite its allure many people find Chinese a hard language to learn including a considerable number of children who learn it as mother tongue The basic units of written Chinese are ideographic symbols called characters and the meaning and pronunciation of each character is determined by the tone attached to it by the speaker Facing the very large number of Chinese characters and words it seems impossible for learners regardless of their native language to master the language other than via rote memorization The attempt to facilitate the route to proficiency in Chinese has understandably attracted the attention of numerous psycholinguistic researchers and educators Using the Theory of Variation as the primary learning framework the authors of this book conducted a number of large scale and robustly designed studies to investigate the relationship between the learning and teaching of Chinese mostly among native speakers However we believe that the results are applicable to the learning of Chinese as a second language Studies into ways of understanding the phonological and orthographical acquisition of characters are reported ways of helping learners come to terms with reading Chinese a textual language that does not always correspond word for word with the spoken discourse are explained and the implications of the evidence for Chinese curriculum and syllabus design are pointedly addressed by the contributors The authors believe that there are effective ways to become skilled in Chinese and that learning Chinese can be pleasurable and interesting They provide empirical evidence for educators parents policymakers and readers interested in Chinese language education They also illuminate the path to the mastery of Chinese in schools and how Chinese should be taught in today's world
