Physical Science Papermarch 2015:

SOUVENIR of 4th International Science Congress Prof. Dipak Sharma, *Future Spacecraft Propulsion Systems and Integration* Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems It discusses how to match near term and far term aerospace vehicles to missions and provides a comprehensive overview of the subject directly contributing to the next generation space infrastructure from space tourism to space exploration This holistic treatment defines a mission portfolio addressing near term to long term space transportation needs covering sub orbital orbital and escape flight profiles In this context a vehicle configuration classification is introduced covering alternatives starting from the dawn of space access A best practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike **Climate Change Policy in Japan** Yasuko Kameyama, 2016-11-25 Amidst growing environmental concerns worldwide Japan is seen as particularly vulnerable to the effects of changing climate This book considers Japan s response to the climate change problem from the late 1980s up to the present day assessing how the Japanese government s policy making process has developed over time From the early days of climate change policy in Japan through the United Nations Framework Convention on Climate Change conferences and Kyoto Protocol right up to the 2015 negotiations the book examines the environmental economic and political factors that have shaped policy As the 2015 Conference of the Parties to the United Nations Framework Convention on Climate Change projects forward beyond 2020 the book concludes by analyzing how Japan has placed itself in the global climate change debate and how the country might and should respond to the problem in the future based on the findings from accumulated history *Physics of Fluid Flow and Transport in Unconventional Reservoir Rocks* Behzad Ghanbarian, Feng Liang, Hui-Hai Liu, 2023-05-09 *Physics of Fluid Flow and Transport in Unconventional Reservoir Rocks* Understanding and predicting fluid flow in hydrocarbon shale and other non conventional reservoir rocks Oil and natural gas reservoirs found in shale and other tight and ultra tight porous rocks have become increasingly important sources of energy in both North America and East Asia As a result extensive research in recent decades has focused on the mechanisms of fluid transfer within these reservoirs which have complex pore networks at multiple scales Continued research into these important energy sources requires detailed knowledge of the emerging theoretical and computational developments in this field Following a multidisciplinary approach that combines engineering geosciences and rock physics *Physics of Fluid Flow and Transport in Unconventional Reservoir Rocks* provides both academic and industrial readers with a thorough grounding in this cutting edge area of rock geology combining an explanation of the underlying theories and models with practical applications in the field Readers will also find An introduction to the digital modeling of rocks Detailed treatment of digital rock physics including decline curve

analysis and non Darcy flow Solutions for difficult to acquire measurements of key petrophysical characteristics such as shale wettability effective permeability stress sensitivity and sweet spots Physics of Fluid Flow and Transport in Unconventional Reservoir Rocks is a fundamental resource for academic and industrial researchers in hydrocarbon exploration fluid flow and rock physics as well as professionals in related fields

The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013) Michael Durant Thomas, 2017-07-25 This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security Drawing on established securitisation frameworks Copenhagen and Paris Schools the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3 500 speeches policies and doctrinal articles since 2003 Importantly the author undertakes an examination of the intersection between the political and the military spheres probing the question of how ideology has influenced the military's uptake on the issue In this context the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper political issue and an unprecedented security threat A close examination of the key political actors their intent outlook and political mandate for broader climate action is therefore crucial to understanding the policy freedom and constraints within which military leaders operate The book consists of eight chapters divided into four parts focusing on perspectives and methodological insights empirical case studies case study comparison and concluding observations Offers a rare and systematic examination of military climate policy by a military officer from Australia Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration Develops a unique method that quantifies climate security enabling a graphical representation for quick and ready reference ideally suited to policy makers

applications and will be an invaluable resource for practicing engineers researchers and graduate students in the field of power electronics applications and systems Applications of Quantum Mechanical Techniques to Areas Outside of Quantum Mechanics. 2nd Edition Emmanuel Haven, Andrei Khrennikov, 2019-11-14 This book deals with applications of quantum mechanical techniques to areas outside of quantum mechanics so called quantum like modeling Research in this area has grown over the last 15 years But even already more than 50 years ago the interaction between Physics Nobelist Pauli and the psychologist Carl Jung in the 1950 s on seeking to find analogous uses of the complementarity principle from quantum mechanics in psychology needs noting This book does NOT want to advance that society is quantum mechanical The macroscopic world is manifestly not quantum mechanical But this rules not out that one can use concepts and the mathematical apparatus from quantum physics in a macroscopic environment A mainstay ingredient of quantum mechanics is quantum probability and this tool has been proven to be useful in the mathematical modelling of decision making In the most basic experiment of quantum physics the double slit experiment it is known from the works of A Khrennikov that the law of total probability is violated It is now well documented that several decision making paradoxes in psychology and economics such as the Ellsberg paradox do exhibit this violation of the law of total probability When data is collected with experiments which test non rational decision making behaviour one can observe that such data often exhibits a complex non commutative structure which may be even more complex than if one considers the structure allied to the basic two slit experiment The community exploring quantum like models has tried to address how quantum probability can help in better explaining those paradoxes Research has now been published in very high standing journals on resolving some of the paradoxes with the mathematics of quantum physics The aim of this book is to collect the contributions of world s leading experts in quantum like modeling in decision making psychology cognition economics and finance **Global Issues** Kristen A. Hite, John L. Seitz, 2016-01-26 Now reorganized and updated throughout the fifth edition of this well regarded introductory global issues text continues to reflect the most important aspects of an increasingly globalized world Reorganized into more accessible chapters better suited to semester long courses with new sections covering development climate change pollution and governance The only survey level text in the field to unite the perspectives of geography political science sociology ecology international relations economics and development studies Moves beyond the international to be truly global in focus with coverage of topics such as wealth and poverty population food energy natural resources and technology Incorporates new case studies and examples including the Fukushima nuclear disaster the effects of changing water supply on migration natural gas fracking and smart grid technology Offers a dynamic and accessible narrative with many student friendly features such as chapter boxes a glossary of terms guides to further reading media and Internet resources Discover up to date related news articles for inspiring discussion and research at <https://www.facebook.com/GlobalIssuesHiteSeitz> The Ocean Economy in 2030 OECD, 2016-04-27 This report explores the growth prospects for the ocean economy its capacity for

Soil Degradation and Restoration in Africa Rattan Lal, B. A. Stewart, 2019-07-09 Soil degradation is a widespread problem in Africa resulting in decreased agricultural productivity while demand for food continues to increase Degradation is caused by

accelerated erosion acidification contamination depletion of soil organic matter and plant nutrients and salinization The major cause of soil degradation in Africa is uncontrolled and excessive grazing in the savanna regions followed by deforestation and the use of inappropriate and extractive farming practices Perpetual neglect of the health of soils in Africa can exacerbate the already serious problems of food and nutritional insecurity and environmental degradation Food and nutritional security of the growing population of Africa can only be achieved if degraded soils are restored and soils of agroecosystems are managed prudently and sustainably Ignoring soils and taking the fragile finite and precious soil resources for granted is the principal cause of poverty hunger and environmental degradation The downward spiral must be reversed through soil restoration measures based on translating science into action This book describes the soils of Africa processes of soil degradation extent and severity of soil degradation and the impacts of degradation processes on food and nutritional security Features Explores the extent and severity of soil degradation in Africa Analyzes the cause effect relationship between anthropogenic activities and soil degradation Reviews processes of soil degradation in Africa including erosion salinization nutrient depletion and decline of soil organic matter Addresses the effect of climate change on soil degradation in Africa Explains how soil degradation causes food and nutritional insecurity Part of the Advances in Soil Sciences series this volume is specifically devoted to the processes and factors that cause soil degradation and the challenges and potential for remediation and restoration of soil health in Africa
