smoke alarm goes off Most people can put two and two together to determine something is wrong They understand that maybe the house is on fire A normal person is either going to check it out or dial 9 1 1 and run out of the house screaming fire Here s a tougher one Let s say you have an appointment set to replace your windshield at 9 15 The Glass Barn texts you to say they are running an hour behind schedule Is that okay Or would you like to reschedule That text is buried among several other messages Most of them are junk A coupon for a dollar off a sandwich free drinks at the bar down the street and a contest entry Which messages should your phone hide or display Most people would say the message from the Glass Barn should be displayed first because it s more urgent But how do you teach a chunk of metal and memory chips to make that decision That s the real challenge When contextual intelligence works it s amazing The problem is that right now your phone gets it right less than a third of the time Google is working hard to improve on that number Their future depends on getting it right Time Magazine ran an article by Victor Lukerson a while back titled Google Searches for Its Future The premise was it s a whole new world out there Google became the go to search engine because of their excellence in desktop search but mobile has changed everything If Google wants to survive they need to reinvent themselves The future is mobile and Google has determined the only way they can survive in this new reality is to focus in onvoice search and Google Now Want to know more Buy the book Lean why cellular is the future of everything *Androids* Chet Haase,2021-08-13 In 2004 Android was two people who wanted to build camera software But they couldn t get investors interested Today Android is a large team at Google shipping an operating system including camera software to over three billion devices worldwide This is the inside story told by the people who made it happen What are the essential ingredients that lead a small team to build software at the sheer scale and impact of Android We may never fully know but this first person account is probably the closest set of clues we have Dave Burke VP of Android Engineering *Androids* captures a strong picture of what the early development of Android as well as the Android team was like Dianne Hackborn Android Framework Engineer *Androids* is the engaging tale of a motley group of coders with a passion to make insanely great products who banged out the operating system when that idea seemed nuts True to his geek genes Chet Haase tells this remarkable tale of technical and business success from the trenches an inspiring massive collective effort of dozens of programmers who flipped their seemingly late timing to their advantage and presaged a generation of platform builders Read *Androids* to discover what it takes to create a hot tech team that shipped a product running today on more than 3 billion devices Jonathan Littman co author of *The Entrepreneurs Faces How Makers Visionaries and Outsiders Succeed* and author of *The Fugitive Game* All profits from the book will be donated to charity [Moon Rome, Florence & Venice](#) Alexei J.
