Zakharov,Victor S. L'vov,Gregory Falkovich,2012-12-06 Since the human organism is itself an open system we are naturally curious about the behavior of other open systems with fluxes of matter energy or information Of the possible open systems it is those endowed with many degrees of freedom and strongly deviating from equilibrium that are most challenging A simple but very significant example of such a system is given by developed turbulence in a continuous medium where we can discern astonishing features of universality This two volume monograph deals with the theory of turbulence viewed as a general physical phenomenon In addition to vortex hydrodynamic turbulence it considers various cases of wave turbulence in plasmas magnets atmosphere ocean and space A sound basis for discussion is provided by the concept of cascade turbulence with relay energy transfer over different scales and modes We shall show how the initial cascade hypothesis turns into an elegant theory yielding the Kolmogorov spectra of turbulence as exact solutions We shall describe the further development of the theory discussing stability problems and modes of Kolmogorov spectra formation as well as their matching with sources and sinks This volume is dedicated to developed wave turbulence in different media **Practical Approach to Electroencephalography E-Book** Mark H.
