INTRODUCTION

In the [Population Dynamics](#) Click & Learn, you'll explore a powerful tool for learning about populations: mathematical models. As you'll see by doing the Click & Learn and this activity, you can use models to answer questions, solve problems, and make predictions about all kinds of populations — from bacteria in your body, to wildlife across the world, to our own human populations.

PART 1: Introduction to Population Dynamics

Open the [Population Dynamics](#) Click & Learn and read through the introduction on the first page.

1. Describe a specific question or problem related to population dynamics that interests you.

I would be curious about the growth and sustainability of the human population in the long term.

2. Do you think the question or problem you described could be investigated using a mathematical population model? Why or why not?

We could likely use the demographic transition model as it measures birth and death rates along with carrying capacity.

PART 2: Exploring the Exponential Growth Model

Open the "Exponential growth model" tab and read the "Introduction" section.

3. The end of the "Introduction" describes how you could use a continuous-time, exponential growth model to simulate an *E. coli* population growing in a lab. Describe another specific population and situation that you could simulate with this type of model.

Other bacteria, populations in recovery from a disaster, or populations in ideal conditions for reproduction.

4. Complete the following table to explain the *biological* meanings of the symbols in the exponential growth model. For each explanation, give a specific example using the population you described above.

Symbol	Biological Meaning	Specific Example
N	The number in the population	how many bacteria are in the population
t	Time we are using as a measure	1 day
dN/dt	The change in population size over the change in reproduction time	In one day, there was an increase from x bacteria to y bacteria
r	Rate of reproduction	1.1 bacteria per minute.
N_0	Initial population	There were initially z bacteria

5. Both dN/dt and r are types of growth rates. What are the differences between them?

While the first represents population growth rates as a whole, r is based more in birth/death rates per

The Role of Population Games in the Design of Optimization-Based Controllers Julian Barreiro-Gomez,2018-08-01

This book reports on the implementation of evolutionary game theory in the design of distributed optimization based controllers First it discusses how the classical population game approach can contribute to and complement the design of optimization based controllers It shows how the features of this approach can be exploited to extend their capabilities in the solution of distributed optimization problems and examines density games in order to consider multiple coupled constraints and preserve the non centralized information requirements Furthermore it establishes a close relationship between the possible interactions among agents in a population with constrained information sharing among different local controllers It also discusses coalitional games focusing on the Shapley power index and proposes an alternative method of computing the latter which reduces computational time as well as a different way of finding it using distributed communication structures All the proposed strategies are then tested on various control problems such as those related to the Barcelona water supply network multiple continuous stirred tank reactors various unmanned aerial vehicle systems and a water distribution system This thesis examined at the Universitat Polit cnica de Catalunya and Universidad de los Andes in 2017 received the award for best thesis in control from the control group of the Spanish Committee of Automatic Control CEA in the same year

Revisiting Brucellosis in the Greater Yellowstone Area National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Revisiting Brucellosis in the Greater Yellowstone Area, 2021-01-30 Brucellosis is a nationally and internationally regulated disease of livestock with significant consequences for animal health public health and international trade In cattle the primary cause of brucellosis is *Brucella abortus* a zoonotic bacterial pathogen that also affects wildlife including bison and elk As a result of the Brucellosis Eradication Program that began in 1934 most of the country is now free of bovine brucellosis The Greater Yellowstone Area GYA where brucellosis is endemic in bison and elk is the last known *B. abortus* reservoir in the United States The GYA is home to more than 5 500 bison that are the genetic descendants of the original free ranging bison herds that survived in the early 1900s and home to more than 125 000 elk whose habitats are managed through interagency efforts including the National Elk Refuge and 22 supplemental winter feedgrounds maintained in Wyoming In 1998 the National Research Council NRC issued a report *Brucellosis in the Greater Yellowstone Area* that

reviewed the scientific knowledge regarding B abortus transmission among wildlife particularly bison and elk and cattle in the GYA Since the release of the 1998 report brucellosis has re emerged in domestic cattle and bison herds in that area Given the scientific and technological advances in two decades since that first report Revisiting Brucellosis in the Greater Yellowstone Area explores the factors associated with the increased transmission of brucellosis from wildlife to livestock the recent apparent expansion of brucellosis in non feedground elk and the desire to have science inform the course of any future actions in addressing brucellosis in the GYA Official File of Comments Received on Alaska Natural Gas Transportation System Draft Environmental Impact Statement ,1976 *Official File of Comments Received on Alaska Natural Gas Transportation System Draft Environmental Impact Statement* United States. Mohamed, 2024-02-07 The majority of global seafood production and mariculture activities take place in marine coastal water bodies especially in areas of high primary productivity from microalgae and plankton. This productivity sustains many forms of ecosystem services and promotes carbon dioxide absorption. However, climate change, ocean warming, acidification, oxygen loss, etc., and anthropogenic disturbances, nutrients intrusion, aquaculture, have influenced the microalgae plankton community assemblage and shifted it into a highly productive zone, causing a severe impact on the marine ecosystem, such as an increase in Harmful Algal Blooms, dead zone expansions, and coral algal phase shifts. So far, there is still little knowledge on the mechanisms of microalgae plankton community response to these changing environmental conditions. Harmful microalgae impair the marine ecosystem through the production of the so-called shellfish toxins, which cause shellfish contamination and poisoning to the vertebrates, including humans. In addition, some microalgae produce fish-killing toxins, ichthyotoxins, causing increasing damage to marine aquaculture. Besides that, the high productivity bloom of microalgae in the water due to coastal eutrophication from anthropogenic activities is known to induce hypoxic/anoxic conditions, causing a severe economic impact on aquaculture. **Federal Register**, 2012-04 Fundamental Chemistry with Matlab Daniele Mazza, Enrico Canuto, 2022-03-25 Fundamental Chemistry with MATLAB highlights how MATLAB can be used to explore the fundamentals and applications of key topics in chemistry. After an introduction to MATLAB, the book provides examples of its application in both fundamental and developing areas of chemistry, from atomic orbitals, chemical kinetics, and gaseous reactions to clean coal combustion and ocean equilibria, amongst others. Complimentary scripts and datasets are provided to support experimentation and learning with scripts outlined. Drawing on the experience of expert authors, this book is a practical guide for anyone in chemistry who is interested harnessing scripts, models, and algorithms of the MATLAB. Provides practical examples of using the MATLAB platform to explore contemporary problems in chemistry. Outlines the use of MATLAB Simulink to produce block diagrams for dynamic systems, such as in chemical reaction kinetics. Heavily illustrated with supportive block diagrams and both 2D and 3D MATLAB plots throughout. *Infectious Disease Ecology of Wild Birds* Jennifer C. Owen, Dana M. Hawley, Kathryn P. Huyvaert, 2021 This accessible textbook focuses on the dynamics of infectious diseases for wild avian hosts across every level of ecological hierarchy. Although the topics and principles discussed in this book relate to birds, they have a far wider relevance and can also be applied to non-avian wildlife host-pathogen systems. Demographic Methods across the Tree of Life Roberto Salguero-Gomez, Marlène Gamelon, 2021-08-31 Demography is everywhere in our lives, from birth to death. Indeed, the universal currencies of survival, development, reproduction, and

recruitment shape the performance of all species from microbes to humans The number of techniques for demographic data acquisition and analyses across the entire tree of life microbes fungi plants and animals has drastically increased in recent decades These developments have been partially facilitated by the advent of technologies such as GIS and drones as well as analytical methods including Bayesian statistics and high throughput molecular analyses However despite the universality of demography and the significant research potential that could emerge from unifying i questions across taxa ii data collection protocols and iii analytical tools demographic methods to date have remained taxonomically siloed and methodologically disintegrated This is the first book to attempt a truly unified approach to demography and population ecology in order to address a wide range of questions in ecology evolution and conservation biology across the entire spectrum of life This novel book provides the reader with the fundamentals of data collection model construction analyses and interpretation across a wide repertoire of demographic techniques and protocols It introduces the novice demographer to a broad range of demographic methods including abundance based models life tables matrix population models integral projection models integrated population models individual based models and more Through the careful integration of data collection methods analytical approaches and applications clearly guided throughout with fully reproducible R scripts the book provides an up to date and authoritative overview of the most popular and effective demographic tools *Demographic Methods across the Tree of Life* is aimed at graduate students and professional researchers in the fields of demography ecology animal behaviour genetics evolutionary biology mathematical biology and wildlife management *Dispersal in Plants* Roger Cousens, Calvin Dytham, Richard Law, 2008-03-06 Propagule evolution
