

Solution

All negative numbers are less than zero. All positive numbers are greater than zero.

$$-2, 0, 1$$

Example 2

Compare: $-3 \bigcirc -4$

Solution

Negative three is three less than zero, and negative four is four less than zero. So

$$-3 > -4$$

The number -5 is read "negative five." Notice that the points on the number line marked 5 and -5 are the same distance from zero but are on opposite sides of zero. We say that 5 and -5 are **opposites**. Other opposite pairs include -2 and 2, -3 and 3, and -4 and 4. The tick marks show the location of numbers called **integers**. Integers include all of the counting numbers and their opposites, as well as the number zero.

If you subtract a larger number from a smaller number (for example, $2 - 3$), the answer will be a negative number. One way to find the answer to such questions is to use the number line. We start at 2 and count back (to the left) three integers. Maybe you can figure out a faster way to find the answer.

**Example 3**

Subtract 5 from 2.

Solution

Order matters in subtraction. Start at 2 and count to the left 5 integers. You should end up at -3 . Try this problem with a calculator by entering $2 - 5 =$. What number is displayed after the $=$ is pressed?

We see that the calculator displays -3 as the solution.

Example 4

Arrange these four numbers in order from least to greatest:

$$1, -2, 0, -1$$

Math Language

Zero is neither positive nor negative. Zero has no opposite.
