Hasenpusch, 2009-09-24 Clearing forms the core part of a smooth and efficiently functioning financial market infrastructure Traditionally it has been provided by clearing houses most of which today act as a central counterparty CCP between the two sides of a trade The rapid growth of cross border trading has sparked discussion on the most efficient industry structure particularly in Europe and the US At the heart of this discussion lies the question of whether the implementation of a single clearing house creates greater benefits than a more competitive but interlinked market structure This is the starting point for this book which analyses the efficiency of clearing and clearing industry structure Along with clear cut definitions and a concise characterisation and descriptive analysis of the clearing industry the book determines the efficiency impact of various cross border integration and harmonisation initiatives between CCPs This serves to identify the most preferable future structure for the clearing industry     Integrative Production Technology for High-Wage Countries Christian Brecher, 2011-12-17 Industrial production in high wage countries like Germany is still at risk Yet there are many counter examples in which producing companies dominate their competitors by not only compensating for their specific disadvantages in terms of factor costs e g wages energy duties and taxes but rather by minimising waste using synchronising integrativity as well as by obtaining superior adaptivity on alternating conditions In order to respond to the issue of economic sustainability of industrial production in high wage countries the leading production engineering and material research scientists of RWTH Aachen University together with renowned companies have established the Cluster of Excellence Integrative Production Technology for High Wage Countries This compendium comprises the cluster's scientific results as well as a selection of business and technology cases in which these results have been successfully implemented into industrial practice in close cooperation with more than 30 companies of the industrial production sector     *Confronting Scale in Archaeology* Gary Lock, Brian Molyneaux, 2006-11-22 Archaeological analysis operates on a continuum of scale from the microscopic analysis of a single artifact to regional interpretations of cultural adaptations over thousands of years A common assumption is that shifting from one scale to another in space and time is a seamless process Scale in this sense is invisible a mere mathematical abstraction Yet issues of scale exist at the fundamental level of archaeological interpretation The traditional analytical debate in archaeology between advocates of the so called processual and postprocessual approaches ranges around the question of scales of reasoning At the one extreme remote observation and the ability to interpret events and processes over vast reaches of time and space are possible because the analysis concerns the hoped for elucidation of general cultural processes at the other they are not as both analyst and subject are isolated in their own

subjectivities Analysts occupying the middle ground often advocate a multidimensional or holistic approach which involves multiple scales of analysis and interpretation As the battleground tends to be the degree to which specific datasets and analytical processes justify the interpretations put forth archaeologists rarely dress issues relating to the profound shifts in the scale of visualization necessary in all approaches to the past And why should they Ignoring scale is the concession archaeology makes to interpretation
