Section 1 Running Water

Key Concepts

- What is the water cycle?
- What does it mean to say Earth's water cycle is balanced?
- What is the most important factor in determining the power of a stream to erode and transport material?
- How do gradient and discharge change between a stream's source and its mouth?
- What is a stream's base level?

Vocabulary

- water cycle
- infiltration
- gradient
- stream channel
- discharge
- tributary
- meander

Water is everywhere on Earth—oceans, glaciers, rivers, lakes, air, soil, and living tissue. All of these reservoirs make up Earth's hydrosphere. Most of it—about 97.2 percent—is stored in oceans, as Figure 1 shows. Ice sheets and glaciers account for another 2.15 percent, leaving only 0.65 percent to be divided among lakes, streams, groundwater, and the atmosphere. The water found in glaciers, ice sheets, lakes, streams, groundwater, and the atmosphere may seem like a tiny percent of Earth's water, but the actual quantities are great.

Figure 1 Distribution of Earth's Water Using Graphs What percentage of Earth's water is not held in its oceans?

The Water Cycle

Water constantly moves among the oceans, the atmosphere, the solid Earth, and the biosphere. This unending circulation of Earth's water supply is the water cycle. This cycle is possible because water readily changes from one state of matter—solid, liquid, or gas—to another at temperatures and pressure common on Earth's surface. The water cycle, shown in Figure 2, is a gigantic worldwide system powered by energy from the sun. The atmosphere provides the most important link between the oceans and land. Water evaporates into the atmosphere from the ocean, and to a lesser extent from the continents. Winds transport this moisture-rich air until conditions cause the moisture to condense into clouds. Precipitation—rain and snow—then falls to Earth. Precipitation that falls into oceans has completed one full cycle and is ready to begin another. However, water that falls on land must make its way back to the ocean to complete the full cycle.

Lymphoproliferative Diseases D.B. Jones,D.H. Wright,2012-12-06 Recent developments in the field of cellular pathology and molecular biology have had a major impact on our ability to diagnose lymphoreticular disease and on our understanding of many of the disease processes which contribute to lymphoreticular pathology Twenty years ago the immunological analysis of lymphoid proliferations was in its infancy The techniques available such as sheep red blood cell rosetting and immune adherence to frozen sections now appear unbelievably crude when compared with our ability to accurately phenotype lymphocytes in suspension in frozen section and more recently in formalin fixed paraffin embedded tissue biopsies Four international work shops have also standardized the nomenclature for the wide range of lineage restricted and lineage related monoclonal antibodies available and have provided a basis for the sophisticated phenotypic analysis of lymphoid neoplasms in even the smallest routine laboratories Our concepts relating to the pathogenesis of a number of human lymphomas have also changed substantially and this has been aided by the development of systems for the classification of human lymphoma which are firmly based in our knowledge of the differentiation and biological behaviour of normal lymphoreticular cells In this monograph we present contributions from many authors examining both leukaemia and lymphoma from an immunological perspective It is our hope that some of these contributions will be of practical value in the laboratory investigation and diagnosis of lymphoreticular disease Other contributions record our conceptual understanding of the histogenesis and pathogenesis of human lymphoma [Country Reports on Human Rights Practices](#) ,2002

Gwynneth Wallaces childhood was shaped by two interesting influences Her childhood home was a small town on the western Canadian prairie Danish farmers had founded a town in which the minister and the church were shaping and Danish was the first language for most The close knit community enjoyed the beauty of the surrounding prairie wheat fields in summer and winter sports in cold weather The second influence was the fact that her father was the railway station agent and Gwynneth grew up in the station house In her adult life she wrote letters for her children who had scattered and also to her grandchildren nieces and nephews as she recalled all the fascinating things that went on in a railway station She called the letters her Dear Railway Children and shared with her young readers the adventures of her early life Late she gathered copies of the many letters and had them printed as a book for children fascinated with her story *United States Reports* United States.
