Lynch, Michael A. Long, Paul B. Stretesky, Kimberly L. Barrett, 2017-08-22

This groundbreaking text provides students with an overview and assessment of green criminology as well as a call to action. Green Criminology draws attention to the ways in which the political economic organization of capitalism causes ecological destruction and disorganization. Focusing on real world issues of green crime and environmental justice, chapters examine ecological withdrawals, ecological additions, toxic towns, wildlife poaching and trafficking, environmental laws and nongovernmental environmental organizations. The book also presents an unintimidating introduction to research from the physical sciences on issues such as climate change, pollution levels and the ecological footprint of humans, providing a truly interdisciplinary foundation for green criminological analysis. To help students succeed in the course and to encourage them to see themselves as future green criminology researchers, the end of chapter study guides include Questions and Activities for Students that review topics students should be able to conceptualize and address, Lessons for Researchers that suggest additional areas of research in the study of green crime.

Novel AI Applications for Advancing Earth Sciences Yadav, Sudesh, Yadav, Satya Prakash, Raj, Pethuru, Tiwari, Prabhakar, Albuquerque, Victor Hugo C. de, 2023-12-29

The Earth Sciences industry faces a new challenge: the need for accurate, efficient and reliable methods to monitor and predict geological phenomena and environmental changes. As climate change, earthquakes and other natural disasters become more frequent and severe, the necessity for advanced tools and techniques is paramount. Traditional methods often fall short in providing the precision and speed required to address these critical issues. Geologists and earth scientists who are grappling with the urgent problem of utilizing artificial intelligence (AI) to revolutionize their field will find the solution within the pages of *Novel AI Applications for Advancing Earth Sciences*. This book offers the research community concepts expanding upon the fusion of AI technology with earth sciences. By leveraging advanced AI tools such as convolutional neural networks, support vector machines, artificial neural networks and the potential of remote sensing satellites, this book transforms the identification of geological features, geological mapping, soil classification and gas detection. Scientists can now predict earthquakes and assess the probability of climate change with unprecedented accuracy. Additionally, the book explains how the optimization of algorithms for specific tasks substantially reduces the time complexity of earth observations, leading to an unprecedented leap in accuracy and efficiency.

The Saturday Review of Politics, Literature, Science and Art ,1901 **The School Review** ,1913 *Stressors in the Marine Environment* Martin Solan, Nia Whiteley, 2016-03-10

A multitude of direct and indirect human influences have significantly altered the environmental conditions, composition and diversity of marine

communities However understanding and predicting the combined impacts of single and multiple stressors is particularly challenging because observed ecological feedbacks are underpinned by a number of physiological and behavioural responses that reflect stressor type severity and timing Furthermore integration between the traditional domains of physiology and ecology tends to be fragmented and focused towards the effects of a specific stressor or set of circumstances This novel volume summarises the latest research in the physiological and ecological responses of marine species to a comprehensive range of marine stressors including chemical and noise pollution ocean acidification hypoxia UV radiation thermal and salinity stress before providing a perspective on future outcomes for some of the most pressing environmental issues facing society today Stressors in the Marine Environment synthesises the combined expertise of a range of international researchers providing a truly interdisciplinary and accessible summary of the field It is essential reading for graduate students as well as professional researchers in environmental physiology ecology marine biology conservation biology and marine resource management It will also be of particular relevance and use to the regulatory agencies and authorities tasked with managing the marine environment including social scientists and environmental economists
