Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value (or values) appear in a dataset. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. As the curve grows in height, which value gets closer to the frequency distribution might also shift the same people could describe the number before sampling the data.

Classroom Activity

In many cases, a frequency distribution is approximately normal. **Frequency distribution** shows how many times a value appears in a dataset. **Frequency** is the number of times a value appears in a dataset. **Frequency** is the number of times a value appears in a dataset.

a. The normal distribution is the distribution of the frequency distribution. **Frequency distribution** is the distribution of the frequency distribution. **Frequency** is the number of times a value appears in a dataset. **Frequency** is the number of times a value appears in a dataset.

b. About the distribution of the data in the first class (page 100) is that being sampled from a distribution. **Frequency** is the number of times a value appears in a dataset. **Frequency** is the number of times a value appears in a dataset.

c. What is the mean of the sample? **Frequency** is the number of times a value appears in a dataset. **Frequency** is the number of times a value appears in a dataset.
