

An APA Research Paper Model

Thomas Delancy and Adam Solberg wrote the following research paper for a psychology class. As you review their paper, read the side notes and examine the following:

- The use and documentation of their numerous sources.
- The background they provide before getting into their own study results.
- The scientific language used when reporting their results.

Center the title one inch from the top. Double-space throughout.

The introduction states the topic and the main questions to be explored.

The researchers supply background information by discussing past research on the topic.

Extensive referencing establishes support for the discussion.

Running on Empty: The Effects of Food Deprivation on Concentration and Perseverance

Many things interrupt people's ability to focus on a task: distractions, headaches, noisy environments, and even psychological disorders. To some extent, people can control the environmental factors that make it difficult to focus. However, what about internal factors, such as an empty stomach? Can people increase their ability to focus simply by eating regularly?

One theory that prompted research on how food intake affects the average person was the glucostatic theory. Several researchers in the 1940s and 1950s suggested that the brain regulates food intake in order to maintain a blood-glucose set point. The idea was that people become hungry when their blood-glucose levels drop significantly below their set point and that they become satisfied after eating, when their blood-glucose levels return to that set point. This theory seemed logical because glucose is the brain's primary fuel (Pindl, 2000). The earliest investigation of the general effects of food deprivation found that long-term food deprivation (36 hours and longer) was associated with sluggishness, depression, irritability, reduced heart rate, and inability to concentrate (Keys, Brozek, Henschel, Mickelsen, & Taylor, 1950). Another study found that fasting for several days produced muscular weakness, irritability, and apathy or depression (Kollar, Slater, Palmer, Docter, & Mandell, 1964). Since that time, research has focused mainly on how nutrition affects cognition. However, as Green, Elliman, and Rogers (1995) point out, the effects of food deprivation on cognition have received comparatively less attention in recent years.

Qualitative Research in Counselling and Psychotherapy John McLeod, 2011-03-17 The need to show how and why counselling works has led to an explosion of research activity and a growing focus on research in counselling and psychotherapy teaching and practice. Yet this book, even now in its second edition, stands alone in addressing qualitative research in therapy. Leading expert John McLeod helps readers through each stage of the research process, explaining techniques for gathering data, writing up the study and evaluating the findings. Each qualitative method is clearly described and critically assessed in terms of its own strengths and weaknesses. Examples from actual research studies are given to show how the methods work in practice. This new edition incorporates developments in qualitative research over the last ten years and includes eight new chapters covering interpretative phenomenological analysis, IPA, autoethnographic methods, action research, case study methods. For all those involved in research, whether as part of academic study or in practice, this book will be essential reading. As an introduction to qualitative methods, it is the perfect course text for all training programmes in counselling, counselling psychology and psychotherapy and will also be of interest to those who work in areas such as psychiatry, clinical psychology and mental health nursing or who provide counselling in other professional areas such as teaching, nursing and social work. McLeod is Professor of Counselling, University of Abertay Dundee.
