2. A good approximation to the average value of f over the region R is obtained when the subregions are chosen so that the function f is nearly constant over each subregion. Figure 1.10 shows a function f over a region R in the xy -plane. The region R is divided into four subregions, each of which is approximately rectangular. The function f is nearly constant over each subregion, and the average value of f over R is approximately the average value of f over the four subregions.
