IBM WebSphere Application Server V8.5 Administration and Configuration Guide for Liberty Profile Anil Esen, Toshiyuki Iue, Neil Patterson, Jennifer Ricciuti, IBM Redbooks, 2015-10-26 IBM WebSphere Application Server V8.5 includes a Liberty profile which is a highly composable dynamic application server profile. It is designed for two specific use cases: Developers with a smaller production runtime and production environments. For developers, it focuses on the tasks that a developer does most frequently and makes it possible for the developer to complete those tasks as quickly and as simply as possible. For production environments, it provides a dynamic small footprint runtime to be able to maximize system resources. This IBM Redbooks publication targets administrators of Liberty environments. It provides the information needed to create, configure, and manage Liberty servers. It includes information about managing multiple servers in an installation, including the use of the new administrative capabilities introduced in WebSphere Application Server V8.5.5.7. The following publications are companion publications for this book: WebSphere Application Server New Features in V8.5.5, REDP 4870; WebSphere Application Server V8.5.5 Technical Overview, REDP 4855; IBM WebSphere Application Server V8.5 Concepts, Planning, and Design Guide, SG24-8022; WebSphere Application Server Liberty Profile Guide for Developers, SG24-8076.

IBM z/OS V2R2 Communications Server TCP/IP Implementation: Volume 2 Standard Applications Bill White, Octavio Ferreira, Teresa Missawa, Teddy Sudewo, IBM Redbooks, 2016-09-21 For more than 50 years, IBM mainframes have supported an extraordinary portion of the world's computing work, providing centralized corporate databases and mission-critical enterprise-wide applications. IBM System z, the latest generation of the IBM distinguished family of mainframe systems, has come a long way from its IBM System 360 heritage. Likewise, its IBM z/OS operating system is far superior to its predecessors in providing, among many other capabilities, world-class and state-of-the-art support for the TCP/IP Internet Protocol suite. TCP/IP is a large and evolving collection of communication protocols that are managed by the Internet Engineering Task Force (IETF), an open volunteer organization. Because of its openness, the TCP/IP protocol suite has become the foundation for the set of technologies that form the basis of the Internet. The convergence of IBM mainframe capabilities with Internet technology, connectivity, and standards, particularly TCP/IP, is dramatically changing the face of information technology and driving requirements for even more secure, scalable, and highly available mainframe TCP/IP implementations. The IBM z/OS Communications Server TCP/IP Implementation series provides understandable, step-by-step guidance for enabling the most commonly used and important functions of z/OS Communications Server TCP/IP. This IBM Redbooks publication provides useful implementation scenarios and configuration recommendations for many of the TCP/IP standard applications that z/OS Communications Server supports.

Manoni, David McCreedy, Carolyn Weiss, Josh Wisniewski, IBM Redbooks, 2013-06-28 In a world where product lifespans are often measured in months the IBM Transaction Processing Facility has remained relevant for more than four decades by continuing to process high volumes of transactions quickly and reliably As the title of this book suggests the z/TPF system uses open standard interfaces to create services Integration of new applications with existing z/TPF functions is a key factor in extending application capabilities The ability for service data objects (SDO) to access the z/TPF Database Facility (z/TPDF) provides a framework for data application program development that includes an architecture and application programming interfaces (APIs) SDO access to z/TPDF provides remote client applications with access to z/TPF traditional data In the simplest terms service oriented architecture (SOA) is a means by which like or unlike systems can communicate with one another despite differences between each system's heritage SOA can neutralize the differences between systems so that they understand one another SOA support for z/TPF is a means by which z/TPF can interact with other systems that also support SOA This book discusses various aspects of SOA in the z/TPF system including explanations and examples to help z/TPF users implement SOA IBM WebSphere Application Server was chosen as the partner system as a means of demonstrating how a world class transaction server and a world class application server can work together This book shows you how you can exploit z/TPF as a transaction server participating in a SOA structure alongside WebSphere Application Server This IBM Redbooks publication provides an introduction to z/TPF and the technologies critical to SOA z/TPF is positioned as a provider or consumer in an SOA by supporting SOAP processing communication bindings and Extensible Markup Language (XML) An example is used to show how z/TPF can be used both as a Web service provider and as a consumer A second example shows how to use WebSphere Operational Decision Management to apply business rules A third example shows how business event processing can be incorporated in z/TPF applications An example is also used to discuss security aspects including z/TPF XML encryption and the z/TPF WS Security wrapper The main part of the book concludes with a discussion of z/TPF in an open systems environment including examples of lightweight implementations to fit z/TPF such as the HTTP server for the z/TPF system The appendixes include information and examples
