success and better outcomes **Agile Service Development** Marc Lankhorst, 2012-04-23 Economies around the globe have evolved into being largely service oriented economies Consumers no longer just want a printer or a car they rather ask for a printing service or a mobility service In addition service oriented organizations increasingly exploit new devices technologies and infrastructures Agility is the ability to deal with such changing requirements and environments Agile ways of working embrace change as a positive force and harness it to the organization s competitive advantage The approach described in this book focuses on the notion of a service as a piece of functionality that offers value to its customers Instead of solely looking at agility in the context of system or software development agility is approached in a broader context The authors illustrate three kinds of agility that can be found in an agile enterprise business process and system agility These three types of agility reinforce each other and establish the foundation for the agile enterprise Architecture patterns models and all of the best practices in system development contribute to agile service development and building agile applications This book addresses two audiences On the one hand it aims at agile and architecture practitioners who are looking for more agile ways of working in designing and building business services or who are interested in extending and improving their agile methods by using models and model based architectures On the other hand it addresses students of enterprise architecture and software development or service science courses both in computer science and in business administration *Artificial Intelligence Models for the Dark Universe* Ariel Fernández, 2024-08-20 The dark universe contains matter and energy unidentifiable with current physical models accounting for 95% of all the matter and energetic equivalent in the universe The enormous surplus brings up daunting enigmas such as the cosmological constant problem and the apparent distortions in the dynamics of deep space and so coming to grips with the invisible universe has become a scientific imperative This book addresses this need reckoning that no cogent physical model of the dark universe can be implemented without first addressing the metaphysical hurdles along the way The foremost problem is identifying the topology of the universe which as argued in the book is highly relevant to unveil the secrets of the dark universe Artificial Intelligence AI is a valuable tool in this effort since it can reconcile conflicting data from deep space with the extant laws of physics by building models to decipher the dark universe This book explores the applications of AI and how it can be used to embark on a metaphysical quest to identify the topology of the universe as a prerequisite to implement a physical model of the dark sector that enables a meaningful extrapolation into the visible sector The book is intended for a broad readership but a background in college level physics and computer science is essential The book will be a valuable guide for graduate students as well as researchers in physics astrophysics and computer science focusing on AI applications to elucidate the nature of the dark universe Key Features Provides readers with an intellectual toolbox to understand physical arguments on dark matter and energy Up to date with the latest cutting edge research Authored by an expert on artificial intelligence and mathematical physics **Digital Cultures: Age of the Intellect** Dr. Ganesh Shermon, 2017 Comments by global thought leaders on

Legal Education in Asia Andrew J. Harding, Jiaxiang Hu, Maartje de Visser, 2017-11-20 Legal education systems like legal systems themselves were framed across Asia without exception according to foreign models These reflect the vestiges of colonialism and can be said to amount to imitating the style and purposes of legal education typical in Western and relatively pure common law and civilian systems Today however we see Asian legal education coming into its own and beginning to accept responsibility for designing curricula and approaches that fit the region's particular needs This book explores how conventional transplanted approaches as regards program design as well as modes of teaching are or are on the cusp of being reimagined and discerns emerging home grown traces of innovation replacing imitation in countries and universities across East Asia
