Directions: For numbers 1-5, read the situation and decide whether you would most likely see a positive association, a negative association, or no association between the variables. Explain your choice.

Situation with Variables	Association and Explanation
1. The number of hours spent babysitting and the amount the babysitter was paid.	
2. The number of exams a person has and their score on a math test.	
3. The temperature outside and the number of layers of clothing worn.	
4. The temperature outside and the amount of ice pops sold.	
5. Age and number of birthday candles.	

Directions: For numbers 6-9, write the type of association in each scatter plot graph.

Spencer, Sandra Vavra, 2015-01-01 The Common Core Standards have recently been adopted in most states across the nation and teachers are in the process of getting to the core of these standards Teaching to standards is not a new concept teachers have adapted to new standards every few years for quite some time And teachers are adaptable as can be seen in this book We are writing this book to demonstrate how teachers use research based strategies to meet Common Core Standards while still focusing on students Our goal is to help teachers visualize students in action as other teachers describe the implementation of research based strategies in their own classrooms show student work samples and provide reflections of student success in achieving the standards Many Common Core Standards books focus on the standards but our approach focuses on strategies that engage the students in the classroom showing how different teachers at varying grade levels have used the strategies to meet the standards With this focus we believe that teachers gain a new and positive perspective on approaching the new standards and see the flexibility of strategies for meeting standards across subject areas We have examined research on the strategies with the purpose of giving teachers a brief description of why these strategies work before giving actual examples from classrooms We also work closely with teachers in the public schools and have our finger on the pulse of what is happening in the public schools one of the current stressors being unpacking the Common Core Standards This book actually focuses on practice We begin by laying out a rationale in our first chapter The Core Value s of Education Then each chapter focuses on a strategy including 1 a brief description about the research supporting each

strategy and 2 several examples from different grade levels which include a description of how the strategy was used student work samples and a reflection on the use of the strategy The research descriptions are fairly short because while we believe professional educators aka teachers in this case should know the research that supports practice we know they are not typically interested in long diatribes about the research

Statistics and Probability in High School Carmen Batanero, Manfred Borovcnik, 2016-07-27 Statistics and probability are fascinating fields tightly interwoven with the context of the problems which have to be modelled The authors demonstrate how investigations and experiments provide promising teaching strategies to help high school students acquire statistical and probabilistic literacy In the first chapter the authors put into practice the following educational principles reflecting their views of how these subjects should be taught a focus on the most relevant ideas and postpone extensions to later stages illustrating the complementary dual nature of statistical and probabilistic reasoning utilising the potential of technology and show its limits and reflecting on the different levels of formalisation to meet the wide variety of students previous knowledge abilities and learning types The remaining chapters deal with exploratory data analysis modelling information by probabilities exploring and modelling association and with sampling and inference Throughout the book a modelling view of the concepts guides the presentation In each chapter the development of a cluster of fundamental ideas is centred around a statistical study or a real world problem that leads to statistical questions requiring data in order to be answered The concepts developed are designed to lead to meaningful solutions rather than remain abstract entities For each cluster of ideas the authors review the relevant research on misconceptions and synthesise the results of research in order to support teaching of statistics and probability in high school What makes this book unique is its rich source of worked through tasks and its focus on the interrelations between teaching and empirical research on understanding statistics and probability
