People Forced to Flee United Nations High Commissioner for Refugees, 2022-02-16 People in danger have received protection in communities beyond their own from the earliest times of recorded history The causes war conflict violence persecution natural disasters and climate change are as familiar to readers of the news as to students of the past It is 70 years since nations in the wake of World War II drew up the landmark 1951 Convention relating to the Status of Refugees People Forced to Flee marks this milestone It is the latest in a long line of publications stretching back to 1993 that were previously entitled The State of the World's Refugees The book traces the historic path that led to the 1951 Convention showing how history was made by taking the centuries old ideals of safety and solutions for refugees to global practice It maps its progress during which international protection has reached a much broader group of people than initially envisaged It examines international responses to forced displacement within borders as well as beyond them and the protection principles that apply to both It reviews where they have been used with consistency and success and where they have not At times the strength and resolve of the international community seems strong yet solutions and meaningful solidarity are often elusive Taking stock today at this important anniversary is all the more crucial as the world faces increasing forced displacement Most is experienced in low and middle income countries and persists for generations People forced to flee face barriers to improving their lives contributing to the communities in which they live and realizing solutions Everywhere an effective response depends on the commitment to international cooperation set down in the 1951 Convention a vision often compromised by efforts to minimize responsibilities There is growing recognition that doing better is a global imperative Humanitarian and development action has the potential to be transformational especially when grounded in the local context People Forced to Flee examines how and where increased development investments in education health and economic inclusion are helping to improve socioeconomic opportunities both for forcibly displaced persons and their hosts In 2018 the international community reached a Global Compact on Refugees for more equitable and sustainable responses It is receiving deeper support People Forced to Flee looks at whether that is enough for what could and should help define the next 70 years

Corporate Power and Human Rights Manette Kaisershot, Nicholas Connolly, 2018-02-02 There is ample evidence about the negative effects business activity of all types can have on the provision of human rights Equally there can be little doubt economic development usually driven through business activity and trade is necessary for any state to provide the institutions and infrastructure necessary to secure and provide human rights for their citizens The United Nations and businesses recognise this tension and are collaborating to effect change in business behaviours through voluntary initiatives such as the Global Compact and John Ruggie s Guiding Principles Yet voluntary approaches are evidently failing to prevent human rights violations and there are few alternatives in law for affected communities to seek justice This book seeks to robustly challenge the current status quo of business approaches to human rights in order to develop meaningful alternatives in an attempt to breach the gap between the realities of business and human rights and its discourse This book was previously published as a special issue of the International Journal of Human Rights **Einstein Himself** Anthony McAuliffe, A more critical look at the man known today by most as one of the greatest scientists of all time A unique and thought provoking narrative quite at odds with the generally accepted dogma How exactly did Einstein rise to become so revered today This is also the story of Mileva Maric a little known woman who just so happened to be Einstein s first wife When Einstein presented his famous Annus Mirabilis or Wonder Year papers in 1905 Mileva was of equal training in the fields of mathematics and physics and indeed more accomplished than Einstein in many other disciplines He seems more an intuitive physicist stated Chaim Weizmann a promoter of Einstein He is not an experimental physicist and though he is able to detect fallacies in the conceptions of physical science he must turn his general outlines of theory over to someone else to work out Historians report that Einstein collaborated with other scientists from 1907 In 1905 there was Mileva Precision Cosmology Bernard J. T. Jones, 2017-04-20 Cosmology seeks to characterise our Universe in terms of models based on well understood and tested physics Today we know our Universe with a precision that once would have been unthinkable This

book develops the entire mathematical physical and statistical framework within which this has been achieved It tells the story of how we arrive at our profound conclusions starting from the early twentieth century and following developments up to the latest data analysis of big astronomical datasets It provides an enlightening description of the mathematical physical and statistical basis for understanding and interpreting the results of key space and ground based data Subjects covered include general relativity cosmological models the inhomogeneous Universe physics of the cosmic background radiation and methods and results of data analysis Extensive online supplementary notes exercises teaching materials and exercises in Python make this the perfect companion for researchers teachers and students in physics mathematics and astrophysics

The Rise and Fall of Carbon Emissions Trading Declan Kuch,2015-07-29 This book presents the results of the first full scale emissions trading schemes in Australia and internationally arguing these schemes will not be sufficient to civilize markets and prevent dangerous climate change Instead it articulates the ways climate policy needs to confront the collective nature of our predicament

Consciousness and Being Robert C. Trundle,2019-02-14 This book is of vital interest to anyone who yearns to know how science theology ethics art and politics do really afford objective truths Not only that but how these truths in seemingly clashing areas are interrelated by common sense and rooted in our incontrovertible consciousness of Being itself Being itself as the basis for truth is defended against truth denying modern philosophers who having headed in the wrong direction with tragic costs of murderous ideologies have completely misunderstood the simple origin of truth in the realist tradition of Aristotle Aquinas Etienne Gilson and others Their profoundness is not bamboozled by the covert and corrupting sophism of today s teachings Anyone interested in surmounting these teachings that include political correctness and a false divide of fact from value which paralyze the very modern ethics that helped to create them should read this book The book reveals how ethics art and politics can be as true as the sciences that inform them

Creating Low Carbon Cities Shobhakar Dhakal,Matthias Ruth,2017-03-10 This book addresses key topics in the current deliberations and debates on low carbon cities that are underway globally Contributions by experts from around the world focus on the key factors required for creating low carbon cities These include appropriate infrastructure ensuring co benefits of climate actions making best use of knowledge and information proper accounting of emissions and social factors such as behavioral change Readers will gain a better understanding of these drivers and explore potential transformation pathways for cities Particular emphasis is given to the current situation of energy consumption and greenhouse gas GHG emissions at the urban level stressing the complexity of measuring GHG emissions from cities Chapters also shed new light on the long term transformation pathways towards low carbon This book discusses key challenges and opportunities in all these domains to aid in creating low carbon cities making it of value to policy makers researchers in academia and consultants working on climate change and energy issues The low carbon cities agenda is of bold ambition and demands rapid societal transformation This book provides invaluable information and analysis on how the goals of this agenda can be achieved and

what will be the significant obstacles in the way The content in the book goes below the surface to reveal on the ground economic engineering and equity issues that are at the heart of the Paris Climate Agreement and the ensuing policy debates In this way Creating Low Carbon Cities serves as a critical scholarly benchmark and as a toolkit for further action William Solecki Professor Institute for Sustainable Cities City University of New York Creating Low Carbon Cities provides a refreshingly critical approach to low carbon urban development what has been achieved so far and the challenges ahead It will be an important data driven resource for local leaders sustainability practitioners and urban planners Ms Monika Zimmermann Deputy Secretary General ICLEI Local Governments for Sustainability
