Bowden,2017-01-26 Evidence based practice has become the benchmark for quality in healthcare and builds on rules of evidence that have been developed in psychology and other health care disciplines over many decades This volume aims to provide clinical neuropsychologists with a practical and approachable reference for skills in evidence based practice to improve the scientific status of patient care The core skills involve techniques in critical appraisal of published diagnostic validity or treatment studies Critical appraisal skills assist any clinician to evaluate the scientific status of any published study to identify the patient relevance of studies with good scientific status and to calculate individual patient probability estimates of diagnosis or treatment outcome to guide practice Initial chapters in this volume review fundamental concepts of construct validity relevant to the assessment of psychopathology and cognitive abilities in neuropsychological populations These chapters also summarize exciting contemporary development in the theories of personality and psychopathology and cognitive ability showing a convergence of theoretical and clinical research to guide clinical practice Conceptual skills in interpreting construct validity of neuropsychological tests are described in detail in this volume In addition a non mathematical description of the concepts of test score reliability and the neglected topic of interval estimation for individual assessment is provided As an extension of the concepts of reliability reliable change indexes are reviewed and the implication of impact on evidence based practice of test scores reliability and reliable change are described to guide clinicians in their interpretation of test results on single or repeated assessments Written by some of the foremost experts in the field of clinical neuropsychology and with practical and concrete examples throughout this volume shows how evidence based practice is enhanced by reference to good theory strong construct validity and better test score reliability *Rating Scales in Parkinson's Disease* Cristina Sampaio,Christopher G. Goetz,Anette Schrag,2012-06-28 For many years the need to develop valid tools to evaluate signs and symptoms of Parkinson Disease PD has been present However the understanding of all intricacies of rating scales development was not widely available and the first attempts were relatively crude In 2002 the Movement Disorders Society

created a task force to systemize the measurement of Parkinson's Disease. Since then the Task Force has produced and published several critiques to the available rating scales addressing both motor and non motor domains of Parkinson Disease. Additionally the task force initiated a project to develop a new version of the UPDRS the MDS UPDRS. But none of this was made available in one convenient source. Until now *Rating Scales in Parkinson's Disease* is written for researchers from the medical and social sciences and for health professionals wishing to evaluate the progress of their patients suffering from Parkinson Disease. The book is both exhaustive in the description of the scales and informative on the advantages and limitations of each scale. As such the text clearly guides readers on how to choose and use the instruments available. Extensive cross referenced tables and charts closely integrate the parts of the book to facilitate readers in moving from one symptom domain to another.
