Android Application Development for the Intel Platform Ryan Cohen,Tao Wang,2014-09-17 The number of Android devices running on Intel processors has increased since Intel and Google announced in late 2011 that they would be working together to optimize future versions of Android for Intel Atom processors Today Intel processors can be found in Android smartphones and tablets made by some of the top manufacturers of Android devices such as Samsung Lenovo and Asus The increase in Android devices featuring Intel processors has created a demand for Android applications optimized for Intel Architecture Android Application Development for the Intel Platform is the perfect introduction for software engineers and mobile app developers Through well designed app samples code samples and case studies the book teaches Android application development based on the Intel platform including for smartphones tablets and embedded devices covering performance tuning debugging and optimization This book is jointly developed for individual learning by Intel Software College and China Shanghai JiaoTong University     The Android Book Imagine Publishing,     Customer Value Creation Behavior Youjiae Yi,2014-04-24 We all live in a service based economy right now and the role of customers has changed from passive buyers to active value creators Customers are actively engaged in the value creation process and customer value creation behavior has become an essential phenomenon For the competitive advantage of the firm employees need to change from exclusive service providers to value facilitators Firms must now change their paradigm from treating customers as mere buyers to engaging customers as value creators This book sheds insight into the essentiality of understanding customer value creation behavior for enhancing firm performance This book is also a comprehensive reference critically analyzing the current state of customer value creation behavior It covers theoretical foundations measurement antecedents and consequences of customer value creation behavior in addition to applications in specific and various contexts The book also highlights the importance of understanding the dimensional structure of customer value creation behaviour for accurate results of empirical research In addition the book also examines customer value destruction behavior or dysfunctional customer behavior This book challenges the conventional belief that handling customer complaints equates with handling dysfunctional customer behavior and provides useful insights for handling employees and customers     *Probabilistic modeling for sensor fusion with inertial measurements* Manon Kok,2016-12-15 In recent years inertial sensors have

undergone major developments. The quality of their measurements has improved while their cost has decreased leading to an increase in availability. They can be found in stand alone sensor units so called inertial measurement units but are nowadays also present in for instance any modern smartphone in Wii controllers and in virtual reality headsets. The term inertial sensor refers to the combination of accelerometers and gyroscopes. These measure the external specific force and the angular velocity respectively. Integration of their measurements provides information about the sensor's position and orientation. However the position and orientation estimates obtained by simple integration suffer from drift and are therefore only accurate on a short time scale. In order to improve these estimates we combine the inertial sensors with additional sensors and models. To combine these different sources of information also called sensor fusion we make use of probabilistic models to take the uncertainty of the different sources of information into account. The first contribution of this thesis is a tutorial paper that describes the signal processing foundations underlying position and orientation estimation using inertial sensors. In a second contribution we use data from multiple inertial sensors placed on the human body to estimate the body's pose. A biomechanical model encodes the knowledge about how the different body segments are connected to each other. We also show how the structure inherent to this problem can be exploited. This opens up for processing long data sets and for solving the problem in a distributed manner. Inertial sensors can also be combined with time of arrival measurements from an ultrawideband UWB system. We focus both on calibration of the UWB setup and on sensor fusion of the inertial and UWB measurements. The UWB measurements are modeled by a tailored heavy tailed asymmetric distribution. This distribution naturally handles the possibility of measurement delays due to multipath and non line of sight conditions while not allowing for the possibility of measurements arriving early i.e. traveling faster than the speed of light. Finally inertial sensors can be combined with magnetometers. We derive an algorithm that can calibrate a magnetometer for the presence of metallic objects attached to the sensor. Furthermore the presence of metallic objects in the environment can be exploited by using them as a source of position information. We present a method to build maps of the indoor magnetic field and experimentally show that if a map of the magnetic field is available accurate position estimates can be obtained by combining inertial and magnetometer measurements.
