

Question Number		Question
1(a) QWC (I, II, III)		
Series		Indicative content
		Extreme weather events are usually defined as being severe (hazardous / disastrous) or unexpected (i.e. outside the range of normal variation). Candidates are able to choose from a range of events, e.g. tropical cyclones, temperate storms, tornadoes, flooding, blizzards, heat waves, fires and drought. Characteristics may be linked to the intensity of the event (i.e. its magnitude), or duration and frequency of occurrence. Linked to this may be the vulnerability of people and the risks (economic / social) associated with particular events. Characteristics may also include ideas about scale of impacts, i.e. localised vs regional etc. Distribution will be controlled by particular event - expect reference to hurricanes (and concentrations at ITCZ etc), drought (Tropical), tornado (interior USA etc) and wildfires (e.g. SE Australia, southern Europe). Smaller scale events, e.g. flooding may have very localised distribution factors (relief, topography, land use, management / diversion schemes).
Level	Mark	Descriptor
Level 1	1-4	Basic and generalised with one or two ideas only relating to chosen extreme weather. Likely does characteristics OR distribution, not both. Lacks structure and very limited use of geographical terminology. Considerable errors in language.
Level 2	5-7	Some ideas examined, but likely to be restricted either in range and or depth. Mentions both characteristics and distribution (could be a place). Some structure and some written language errors.
Level 3	8-10	Describes both characteristics and distribution of a particular event (may be unbalanced), providing depth and/or detail. Well structured; written language errors are rare.
