

PROOFING

The proofing feature maintains a warm environment useful for rising yeast-leavened products.

How to set the oven for proofing

1. Enter the proofing mode.

Press the **PROOF** pad.

2. Start the proofing function.

Press the **SET/START** pad.

The proofing feature automatically provides the optimum temperature for the proof process, and therefore does not have a temperature adjustment.

3. Press the **CLEAR/OFF** pad at any time to turn off the proofing feature.

- If you press the **PROOF** pad when the oven temperature is above 100°F, **Hot** will appear in the display. Because these functions produce the best results when started while the oven is cool, we recommend that you wait until the oven has cooled down and **Hot** disappears from the display.
- To avoid lowering the oven temperature and lengthening proofing time, do not open the oven door unnecessarily.
- Check bread products early to avoid over-proofing.
- Do not use the proofing mode for warming food or keeping food hot. The proofing oven temperature is not hot enough to hold foods at safe temperatures. Use the keep warm feature (see next page).
- For best results, cover the dough with a cloth or with plastic wrap (the plastic may need to be anchored underneath the container so the oven fan will not blow it off).
