Pattern Classification Duda Solution Manual Chapter :

Pattern Classification Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition, readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises, and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department. Numerical Linear Approximation in C Nabih Abdelmalek, William A. Malek, 2008-05-19

Illustrating the relevance of linear approximation in a variety of fields, *Numerical Linear Approximation in C* presents a unique collection of linear approximation algorithms that can be used to analyze model and compress discrete data. Developed by the lead author, the algorithms have been successfully applied to several engineering projects at the National Research Council of Canada. Basing most of the algorithms on linear programming techniques, the book begins with an introductory section that covers applications, the simplex method, and matrices. The next three parts focus on various L_1 , Chebyshev, and least squares approximations, including one-sided bounded variables and piecewise. The final section presents the solution of underdetermined systems of consistent linear equations that are subject to different constraints on the elements of the unknown solution vector. Except in the preliminary section, all chapters include the C functions of the algorithms along with drivers that contain numerous test case examples and results. The accompanying CD-ROM also provides the algorithms written in C code as well as the test drivers. To use the software, it is not required to understand the theory behind each function. *Handbook of Research on Machine Learning Applications and Trends: Algorithms, Methods, and Techniques*

Olivas, Emilio Soria, Guerrero, José David Martín, Martínez-Sober, Marcelino, Magdalena-Benedito, José Rafael, Serrano López, Antonio José, 2009-08-31 This book investigates machine learning (ML), one of the most fruitful fields of current research, both in the proposal of new techniques and theoretic algorithms and in their application to real life problems.
