Pattern Calculus Computing With Functions And Structures:

Pattern Calculus Barry Jay, 2009-07-30 Over time basic research tends to lead to specialization increasingly narrow topics are addressed by increasingly focussed communities publishing in increasingly con ned workshops and conferences discussing increasingly incremental contri tions Already the community of programming languages is split into various s communities addressing different aspects and paradigms functional imperative relational and object oriented Only a few people manage to maintain a broader view and even fewer step back in order to gain an understanding about the basic principles their interrelation and their impact in a larger context The pattern calculus is the result of a profound re examination of a 50 year velopment It attempts to provide a unifying approach bridging the gaps between different programming styles and paradigms according to a new slogan compu tion is pattern matching It is the contribution of this book to systematically and elegantly present and evaluate the power of pattern matching as the guiding paradigm of programming Patterns are dynamically generated discovered passed applied and automatically adapted based on pattern matching and rewriting technology which allows one to elegantly relate things as disparate as functions and data structures Of course pattern matching is not new It underlies term rewriting it is for example inc porated in typically functional programming languages like Standard ML but it has never been pursued as the basis of a unifying framework for programming

together with two short papers two invited papers and one abstract of an invited paper were carefully reviewed and selected from 60 submissions The papers are organized in topical sections on program verification design synthesis and testing calculi specifications composition and transformation automata temporal logics tool and short papers **Theoretical Computer Science** Christian S. Calude, Vladimiro Sassone, 2010-08-23 This book constitutes the refereed proceedings of the 6th FIP WG 2.2 International Conference TCS 2010 held as a part of the 21th World Computer Congress WCC 2010 in Brisbane Australia in September 2010 The 23 revised full papers presented together with 4 invited talks were carefully reviewed and selected from 39 submissions TCS 2010 deals with topics focused at but not limited to algorithms complexity models of computation logic semantics specification and verification power awareness issues in wireless networks data mining knowledge discovery multiprocessor issues as well as AI issues **Next Generation Information System Technology** Joachim W.

Schmidt, 1991-06-26 Currently the field of information systems technology is rapidly extending into several dimensions There is the semantic dimension including object orientation data deduction and extended knowledge representation schemes there is improved systems integration and there are new tools All these extensions aim to provide semantically richer and better engineered information systems that allow for more adequate and complete representations and thus extend the effective use of database technology to a wider class of applications Database researchers and developers whether they are committed to application or to system construction are convinced that next generation information system technology will be heavily determined by a handful of new concepts that they have to understand and work out in detail now This volume concentrates on the following topics Extended data types and data models database programming languages Rule based data deduction expert systems knowledge bases Object orientation and semantic data modelling DB application development methodologies and tools Interface technology parallelism interoperability New database applications **Abstract Computing Machines**
