Chapter 2 (Bayesian Decision Theory)

Problem 11 (randomized rules)

Part (a): Let $R(x)$ be the average risk given measurement x . Then since this risk depends on the action and correspondingly the probability of taking such action, this risk can be expressed as

$$R(x) = \sum_{i=1}^m R(a_i|x)P(a_i|x)$$

Then the total risk (over all possible x) is given by the average of $R(x)$ or

$$R = \int_{\Omega_x} (\sum_{i=1}^m R(a_i|x)P(a_i|x))p(x)dx$$

Part (b): One would pick

$$P(a_i|x) = \begin{cases} 1 & i = \text{ArgMin}_i R(a_i|x) \\ 0 & i = \text{anything else} \end{cases}$$

Thus for every x pick the action that minimizes the local risk. This amounts to a deterministic rule i.e. there is no benefit to using randomness.

Abductive Inference Models for Diagnostic Problem-Solving Yun Peng, James A. Reggia, 2012-12-06 Making a diagnosis when something goes wrong with a natural or man-made system can be difficult. In many fields such as medicine or electronics, a long training period and apprenticeship are required to become a skilled diagnostician. During this time, a novice diagnostician is asked to assimilate a large amount of knowledge about the class of systems to be diagnosed. In contrast, the novice is not really taught how to reason with this knowledge in arriving at a conclusion or a diagnosis, except perhaps implicitly through case examples. This would seem to indicate that many of the essential aspects of diagnostic reasoning are a type of intuition-based common sense reasoning. More precisely, diagnostic reasoning can be classified as a type of inference known as abductive reasoning or abduction. Abduction is defined to be a process of generating a plausible explanation for a given set of observations or facts. Although mentioned in Aristotle's work, the study of formal aspects of abduction did not really start until about a century ago.

Numerical Linear Approximation in C Nabih Abdelmalek, William A. Malek, 2008-05-19 Illustrating the relevance of linear approximation in a variety of fields Numerical Linear Approximation in C presents a unique collection of linear approximation algorithms that can be used to analyze model and compress discrete data Developed by the lead author the algorithms have been successfully applied to several engineering projects at the National Research Council of Canada Basing most of the algorithms on linear programming techniques the book begins with an introductory section that covers applications the simplex method and matrices The next three parts focus on various L1 Chebyshev and least squares approximations including one sided bounded variables and piecewise The final section presents the solution of underdetermined systems of consistent linear equations that are subject to different constraints on the elements of the unknown solution vector Except in the preliminary section all chapters include the C functions of the algorithms along with drivers that contain numerous test

case examples and results The accompanying CD ROM also provides the algorithms written in C code as well as the test drivers To use the software it is not required to understand the theory behind each function *Parallel Problem Solving from Nature - PPSN IX* Thomas Philip Runarsson, 2006-09-13 This book constitutes the refereed proceedings of the 9th International Conference on Parallel Problem Solving from Nature PPSN 2006 The book presents 106 revised full papers covering a wide range of topics from evolutionary computation to swarm intelligence and bio inspired computing to real world applications These are organized in topical sections on theory new algorithms applications multi objective optimization evolutionary learning as well as representations operators and empirical evaluation
