ScanWise Implant

Simplify scanning of patients with **MR Conditional implants**

By Johan van den Brink, Cecilia Possanzini, Marius van Meel, Jan Groen, Tom Geraedts, Sjoerd Last, Jan Konijn, Miteshkumar Mitra, Paul Kaufholz, Arianne van Mulswinkel, Paul Harvey

Patients with implants are not scanned routinely in MRI systems. Warning signs prohibit entrance to patients with a pacemaker, a hip implant, a clip or vascular coil, or any other device implanted in or worn on the body. Rigorous prescreening procedures apply, to identify patients with implants before they undergo an MRI examination.

In recent years, however, many MR Conditional implants have become available, and patients with such implants can now benefit from MR imaging. Nevertheless, scanning patients with MR Conditional implants remains challenging.

How confident are you that you can meet the MR Conditional requirements in your MRI practice? How do you explain to your neurologists, orthopedic, or vascular surgeons, and cardiologists that you can provide MRI services for patients with implants? How can you train your radiographers to apply the required limits to MR sequences if they cannot dial in the specified numbers? Furthermore, how do they prevent the MRI system from inserting pre-scans or system adjustments which exceed the constraints?

Philips has developed ScanWise Implant to simplify scanning of patients with MR Conditional implants. It provides you with the guidance and automatic features to easily meet the implant manufacturers MR Conditional specifications. It is as easy as entering patient demographics during the registration process. You can verify the static field strength and the Spatial Field Gradient in an interactive user interface, and copy the specific absorption rate (SAR) and other specifications from the implant label to the MRI scans on the patient registration screen. This sets the limits for the entire examination. No need to check each individual sequence; the system takes care of the constraints.

This publication provides an overview of our new ScanWise Implant technology that supports you in meeting current MR Conditional labeling requirements.

Handbook of Texture Analysis Ayman El-Baz, Mohammed Ghazal, Jasjit S. Suri, 2024-06-21 The major goals of texture research in computer vision are to understand model and process texture and ultimately to simulate the human visual learning process using computer technologies In the last decade artificial intelligence has been revolutionized by machine learning and big data approaches outperforming human prediction on a wide range of problems In particular deep learning convolutional neural networks CNNs are particularly well suited to texture analysis This volume presents important branches of texture analysis methods which find a proper application in AI based medical image analysis This book Discusses first order second order statistical methods local binary pattern LBP methods and filter bank based methods Covers spatial frequency based methods Fourier analysis Markov random fields Gabor filters and Hough transformation Describes advanced textural methods based on DL as well as BD and advanced applications of texture to medial image segmentation Is aimed at researchers academics and advanced students in biomedical engineering image analysis cognitive science and computer science and engineering This is an essential reference for those looking to advance their understanding in this applied and emergent field

Handbook of Superconductivity David A. Cardwell, David C. Larbalestier, Aleksander Braginski, 2022-07-05 This is the last of three volumes of the extensively revised and updated second edition of the Handbook of Superconductivity The past twenty years have seen rapid progress in superconducting materials which exhibit one of the most remarkable physical states of matter ever to be discovered Superconductivity brings quantum mechanics to the scale of the everyday world Viable applications of superconductors rely fundamentally on an understanding of these intriguing phenomena and the availability of a range of materials with bespoke properties to meet practical needs While the first volume covers fundamentals and various classes of materials the second addresses processing of these into various shapes and configurations needed for applications and ends with chapters on refrigeration methods necessary to attain the superconducting state and the desired performance This third volume starts with a wide range of methods permitting one to characterize both the materials and various end products of processing Subsequently diverse classes of both large scale and electronic applications are described Volume 3 ends with a glossary relevant to all three volumes Key Features Covers the depth and breadth of the field Includes contributions from leading academics and industry professionals across the world Provides hands on familiarity with the characterization methods and offers descriptions of representative examples of practical applications A comprehensive reference the handbook is suitable for both graduate students and practitioners in experimental physics materials science and multiple engineering disciplines including electronic and electrical chemical mechanical metallurgy and others

Handbook of Microbiome and Gut-Brain-Axis in Alzheimer's Disease Giulio Maria Pasinetti, 2022-07-15 Despite being confined to the gastrointestinal tract the gut microbiome has a wide impact on human physiology supplementing its host's biochemistry in a complex symbiotic relationship Research in the field has

evolved rapidly in the last decade and we are now developing a better understanding of how our gut microbiome can influence our immune systems metabolism neurological signaling and perhaps most unexpectedly our brains a phenomenon described as the gut brain axis This book Handbook of Microbiome and Gut Brain Axis in Alzheimer s Disease sets out to explore the complex role of the microbiome with regard to Alzheimer s disease AD The microbiome is a critical and often overlooked aspect of immunity which in turn plays a role in cognition The book presents current research into the gut microbiota and its far reaching impacts on cognitive function and neurodegeneration Interventions including probiotic supplementation fecal transfer and supplementation with microbial metabolites are discussed as is the use of certain probiotics to study the effects of the gut microbiota on behavior and cognitive function and as potential therapeutics for AD Other topics covered include the influence of the gut and oral microbiota on immune inflammatory signals cytokines neuroendocrine hormones bacterial components neuroactive molecules and microbial metabolites The book is divided into four sections each covering a research area pertinent to the gut brain axis and its relationship with cognitive function and AD It will be of interest to all those whose work includes the study and understanding of these complex multi variable biological mechanisms particularly in the context of cognitive function and AD The cover shows a color edited MRI image of a sagittal section of a neurological control brain of Dr Giulio Maria Pasinetti

MRI in Veterinary Neurology Adriano

Wang-Leandro,2024-11-18 Magnetic resonance imaging is without a doubt a key diagnostic tool in clinical veterinary neurology Its implementation in animals dates to the early 80s as dogs were used as experimental model for brain edema and abscesses however it was not until one decade later that this modality was implemented for clinical purposes in veterinary neurology As the availability of low and high field magnets in veterinary centers increase and technology advances the understanding of central nervous system pathologies in the pre mortem phase including temporal evolvement of disease and monitoring effects of therapeutic approaches to the nervous tissue morphology has been likewise enhanced Moreover MRI findings of multiple diseases affecting the nervous system of animals including epilepsy meningoencephalitis neurodegenerative disorders metabolic encephalopathies spinal cord injury among others mirror their counterpart in human medicine therefore highlighting the pivot role of this modality for translational medicine

Exploring the Biopsychosocial Model in Irritable Bowel Syndrome Anna-Karin Norlin,2020-10-09 Background Irritable bowel syndrome IBS is a common chronic

relapsing and sometimes disabling symptombased disorder of gut brain interactions It has got a female predominance and occurs in all ages with a slight decrease among elderly The IBS symptoms can affect everyday work and social life in addition to an increased use of health care resources Most IBS patients are diagnosed and helped in primary health care PHC For

many patients available treatment is insufficient It is known that both extraintestinal symptoms such as fatigue as well as comorbidities such as mood disorders chronic pain syndromes and insomnia contribute to the illness burden often to a larger extent than the gastrointestinal symptoms as such Even though the pathophysiology of IBS is not completely known it is now conceptualized as a disorder of altered brain gut interactions where a biopsychosocial model helps in understanding the symptoms Exposure to stress is thought to play an important role overall in the pathology of IBS as well as immune activation at least in a subgroup of patients This thesis aimed to gain deeper understanding of the biopsychosocial mechanisms of IBS and its associations with stress comorbidities and fatigue Methods Study I and II are based on the Twin cities IBS study population which included IBS patients and a control group of other patients without gastrointestinal complaints from ten PHC centres in the county of sterg tland Alongside demographics psychosocial questionnaires and a GI symptom diary it included analyses of hair cortisol concentrations HCC evaluated in study I and data on self rated health as well as diagnoses of comorbidities and number of health care contacts from a regional registry evaluated for study II Study III of this thesis is based on the Brain Gut study with a population of secondary care IBS patients and healthy controls HC It included self rated measures of fatigue impact on the daily life and early adverse life events as well as measures of circulating TNF and analyses of resting state functional magnetic resonance imaging of brain areas within a mesocorticolimbic circuitry of known relevance for fatigue Results Study I Perceived stress was higher in the IBS group while a considerable portion of IBS patients had low levels of HCC No association between perceived stress and HCC was seen in either group Study II IBS patients had lower self rated health and more PHC utilization than the non IBS patients Good self rated health was independently associated with younger age higher sense of coherence and less gastrointestinal pain in both groups In IBS PHC utilization was associated with comorbidities in general and sleep disorders in particular Study III Fatigue impact on daily life and TNF were higher in IBS patients than in HC In IBS further an association was seen between fatigue impact on the one hand and TNF emotional abuse in childhood as well as altered mesocorticolimbic connectivity on the other Conclusion In conclusion this thesis firstly emphasizes that IBS patients in many ways including health outcomes consists a vulnerable group of PHC patients We add evidence for a possible suppression of the stress response system in a substantial portion of IBS patients Further comorbid sleep disorders seem to be particularly associated with excess PHC utilization in IBS and could possibly be a target for treatment interventions Moreover alongside treating gastrointestinal pain efforts to improve the individuals sense of coherence could be one way to achieve better self rated health in both IBS and non IBS patients Finally we suggest that fatigue in IBS is associated with immune activation central alterations and to some extend also previous childhood trauma IBS Irritable Bowel Syndrome r en vanlig kronisk tarmsjukdom med terkommande symtom av buksm rta tillsammans med ndrade avf ringsvanor Den drabbar cirka 10% av befolkningen och r vanligast hos kvinnor samt n got mindre vanlig hos ldre F r m nga inneb r IBS ett stort lidande f rs mrad livskvalitet och kad sjukv rdskonsumtion De flesta

IBS patienter tas om hand i primär vård. Nuvarande tillgänglig behandling är ofta otillräcklig. En del IBS patienter har också andra symtom såsom muskelsmärta och uttalad trötthet som inte går över vid vila så kallad fatigue. Det är också vanligt förekommande med andra sjukdomstillstånd såsom depression och andra smärtsyndrom. Det är visat att den typen av symtom och samsjuklighet mellan dessa ger vid handen att IBS patienten har de faktiska magtarmsymptomen. Numera tror man att symtomen vid IBS beror på störningar i det msesidiga samspelet mellan tarm och hjärna men de bakomliggande mekanismerna är inte helt klarlagda. För att förstå IBS patientens symtom är en så kallad biopsykosocial förklaringsmodell till stor hjälp då symtomen inte bara beror av biologiska mekanismer utan individens sociala miljö samt psykologiska reaktioner spelar också stor roll. Stress är centralt för utveckling av som symtom vid IBS och även för förståelsen av den biopsykosociala förklaringsmodellen generellt. Tidigare forskning visar också att immunsystemet är påverkat hos åtminstone en andel av IBS patienterna. Syftet med den här avhandlingen var att utforska förståelsen av biopsykosociala mekanismer vid IBS med fokus på stress, samsjuklighet och fatigue. Delstudie I och II jämförde IBS patienter och en kontrollgrupp med andra primär vårdspatienter utan magtarmsymtom på 10 vårdcentraler i stergård. Delstudie III undersökte IBS patienter på magtarmkliniken i Linköping i jämförelse med friska kontroller. I delstudie I undersökte vi kortisol i händelse av stress och hur stresshormonnivåerna varierar över tid. Trots att IBS patienterna som grupp beskrev en större självupplevd stress hade en andel friska ländar nivåer av kortisol i händelse av stress. I delstudie II undersökte vi hur samsjuklighet i form av totalt antal registrerade diagnoser samt vissa specifika diagnoser och psykologiska aspekter samt magtarmsymtom påverkade självskattad hälsa och primär vårdskonsumtion hos IBS och icke IBS patienterna. I båda grupperna var lösgörandet av sammanhang och lösgörandet av buksmärta oberoende associerat med betydande självskattad hälsa. Hos IBS patienterna fann vi närmast en femfaldigt ökad risk att ha många kontakter med primär vård vid samtidigt diagnostiserad smärtsamtillstånd. Den kopplingen sågs inte hos patienterna utan IBS. Däremot var det totala antalet diagnoser också en faktor av betydelse för vårdskonsumtionen i båda grupperna. I delstudie III belyste vi fatigue och eventuella kopplingar till nivåer av en proinflammatorisk signalmolekyl TNF samt till självrapporterade missfällanden under uppvaktnen hos IBS patienter och friska kontroller. Med funktionell magnetkameraundersökning av hjärnan undersökte vi också kopplingen mellan aktivitetsmönster i områden som relaterade till emotionella, kognitiva och motivationsrelaterade aspekter av fatigue hos IBS patienter och friska kontroller. Vi fann att IBS patienterna upplevde fyrfaldigt mer påverkan av fatigue på sina dagliga liv än kontrollerna. Den ökade trötthetsupplevelsen var också relaterad till nivåer av TNF i blodet hos IBS patienterna liksom i viss mån till missfällanden under uppvaktnen. Slutligen såg vi att lösgörandet av upplevd fatigue hos IBS patienterna ledde till minskad samtida aktivitet, konnektivitet i de undersökta hjärnområdena som representerade de motivationsrelaterade och kognitiva aspekterna av trötthetsupplevelsen. Någon liknande koppling mellan TNF och förändringar i hjärnaktiviteten sågs ej. Sammanfattningsvis pekar våra resultat på lösgörandet av samsjuklighet, självskattad hälsa, psykosociala faktorer samt fatigue på att IBS patienterna är en särskild patientgrupp som bör uppmärksammas. Våra

resultat från delstudie I pekar vidare mot att stressaxeln kan vara uttröttad hos vissa IBS patienter Enligt resultaten i delstudie II är kända av sammanhang jämnt buksmärta faktorer som beaktande för att om möjligt uppnå bättre självskattad hälsa både hos IBS och andra primärvärdspatienter Vidare synes IBS patienternas förhållandevis stora värdrkonsumtion vara särskilt avhängig av samtidig smärta vilket också det torde vara av betydelse i klinisk praxis och av intresse för framtida forskning Delstudie III visar ett samband mellan fatigue som besymtom vid IBS och själva barndomstrauman som möjlig immunaktivering Vi fann även att IBS patienter som upplevde stor påverkan av fatigue på sina dagliga liv också hade en minskad konnektivitet mellan hjärnstrukturer av betydelse för kognition och motivation

Comprehensive Textbook of Clinical Radiology Volume I: Principles of Clinical Radiology, Multisystem Diseases & Head and Neck-E-book Praveen Gulati, N Chidambaranathan, Anil Ahuja, Arangaswamy Anbarasu, Abhishek Mahajan, 2023-05-15

Comprehensive Textbook of Clinical Radiology is a fully integrated illustrated textbook of radiology to cater for residents and practising radiologists It is a one stop solution for all academic needs in radiology It helps radiologists as a single reference book to gain complete knowledge instead of referring to multiple resources More than 500 authors recognized experts in their subspeciality have contributed to this book To meet the expectations of clinical radiologists thorough clinical expertise and familiarity with all the imaging modalities appropriate to address their clinical questions are necessary regardless of one's favoured subspeciality To keep the content relevant to them we have tried to stay upgraded to their level This book comprises six volumes which gives information on Radiological Anatomy Embryology Nomogram Normal Variants Physics Imaging Techniques and all the aspects of Diagnostic Radiology including Neuroradiology Head and Neck Chest and CVS Abdomen Obstetrics and Gynaecology Breast Musculoskeletal and Multisystem Disorders related Interventional techniques It will serve as a primary reference for residents and subspeciality trainees and fellows to facilitate their learning in preparation for their examination and also the consultant radiologists in their daily clinical practice This volume is subdivided into three sections Section 1 covers the principles of clinical radiology and deals with basic to advanced aspects of general radiology The physics of each imaging modality is described in detail for radiology residents Principles of pathology genetics and statistics important for radiologists from research point of view are enumerated Basic principles of medicine including management of contrast reactions basic and advanced life support which are important for radiologists in day to day practice are dealt in dedicated chapter Section 2 covers the multisystem disorders that affect multiple body systems either at the same time or over a period of time Imaging plays a vital role in identifying the extent of systems involved and also in diagnosis by recognising the pattern of systems involved The last part of the section deals with the general principles of oncoimaging dealing with multisystem involvement and facilitates easier understanding of this complex subject The format is ideal for both in depth knowledge and daily reference Section 3 covers head and neck imaging anatomy of neck techniques of imaging and paediatric neck In addition all neck spaces and lymph nodes are discussed with anatomy and pathology with high quality
