Porter, 2022-10-20 In this book Stanley E Porter offers a unique language based critique of New Testament theology by comparing it to the development of language study from the Enlightenment to the present Tracing the histories of two disciplines that are rarely considered together Porter shows how the study of New Testament theology has followed outmoded conceptual models from previous eras of intellectual discussion

He reconceptualizes the study of New Testament theology via methods that are based upon the categories of modern linguistics and demonstrates how they have already been applied to New Testament Greek studies Porter also develops a workable linguistic model that can be applied to other areas of New Testament research Opening New Testament Greek linguistics to a wider audience his volume offers numerous examples of the productivity of this linguistic model especially in his chapter devoted to the case study of the Son of Man

Linguistic Relativities John Leavitt, 2010-12-23 There are more than six thousand human languages each one unique For the last five hundred years people have argued about how important language differences are This book traces that history and shows how language differences have generally been treated either as of no importance or as all important depending on broader approaches taken to human life and knowledge It was only in the twentieth century in the work of Franz Boas and his students that an attempt was made to engage seriously with the reality of language specificities Since the 1950s this work has been largely presented as yet another claim that language differences are all important by cognitive scientists and philosophers who believe that such differences are of no importance This book seeks to correct this misrepresentation and point to the new directions taken by the Boasians directions now being recovered in the most recent work in psychology and linguistics
