Philosophy Of Microbiology Maureen O Malley:

Philosophy of Microbiology Maureen O'Malley, 2014-08-28 Microbes and microbiology are seldom encountered in philosophical accounts of the life sciences Although microbiology is a well established science and microbes the basis of life on this planet neither the organisms nor the science have been seen as philosophically significant This book will change that It fills a major gap in the philosophy of biology by examining central philosophical issues in microbiology Topics are drawn from evolutionary microbiology microbial ecology and microbial classification These discussions are aimed at philosophers and scientists who wish to gain insight into the basic philosophical issues of microbiology **The Oxford Handbook of Philosophy of Science** Paul Humphreys, Anjan Chakravartty, Margaret Morrison, Andrea Woody, 2016 This Handbook combines coverage of traditional areas in the philosophy of science such as causation explanation and theory structure with chapters on new areas such as philosophy of astronomy data complexity theory and emergence The articles are accessible to scientifically educated non philosophers as well as to philosophers **Symbolism 2020** Rüdiger Ahrens, Florian Klaeger, Klaus Stierstorfer, 2020-12-07 This special anniversary volume of Symbolism explores the nexus between symbolic signification and the future from an interdisciplinary perspective How contributors ask has the future been variously rendered in symbolic terms How do symbols and symbolic reference shape our ideas of the future To what extent are symbols constitutive of futures and to what extent do they restrain communication about what is possible and the imagination of fundamental change Moreover how have symbolic practices shaped not only artistic representations of the future but also scientific attempts at forecasting and modelling it What then is the relevance of symbolism for negotiations of the future in cultural and academic production In essays ranging from literary and film studies to the philosophy of art and ecological modelling the volume seeks to lay groundwork in theorizing and historicising symbols of the future as much as the future of symbolism **Brill's Companion to the Philosophy of Biology** Andrea Borghini, Elena Casetta, 2019-12-16 In this volume Andrea Borghini and Elena Casetta introduce a wide spectrum of key philosophical problems related to life sciences in a neat framework and an accessible style with a special emphasis on metaphysical issues The volume is divided into three parts The first addresses the two main questions stemming from life sciences what is life and what is the correct understanding of the theory of evolution The second part looks at metaphysical questions concerning biological entities environments species organisms and biological individuals The third part focuses on theoretical questions of particular ethical and political significance sex and gender the biotechnological revolution and the evolution of behavior and culture Each chapter is followed by a list of further readings *Individuation, Process, and Scientific Practices* Otávio Bueno, Ruey-lin Chen, Melinda Bonnie Fagan, 2018 This book provides novel perspectives grounded in scientific practices on individuality and individuation subjects traditionally treated by metaphysicians It connects the concepts of the individual and individuation with analyses of scientific experimentation and merges philosophy with scientific study in biology physics and chemistry *The Philosophy of*

Biology Kostas Kampourakis, 2013-06-18 This book brings together for the first time philosophers of biology to write about some of the most central concepts and issues in their field from the perspective of biology education. The chapters of the book cover a variety of topics ranging from traditional ones such as biological explanation, biology and religion or biology and ethics to contemporary ones such as genomics, systems biology or evolutionary developmental biology. Each of the 30 chapters covers the respective philosophical literature in detail and makes specific suggestions for biology education. The aim of this book is to inform biology educators, undergraduate and graduate students in biology and related fields, students in teacher training programs and curriculum developers about the current state of discussion on the major topics in the philosophy of biology and its implications for teaching biology. In addition, the book can be valuable to philosophers of biology as an introductory text in undergraduate and graduate courses.

The Tangled Tree David Quammen, 2019-08-06 In this New York Times bestseller and longlist nominee for the National Book Award, our greatest living chronicler of the natural world, The New York Times David Quammen, explains how recent discoveries in molecular biology affect our understanding of evolution and life's history. In the mid 1970s, scientists began using DNA sequences to reexamine the history of all life. Perhaps the most startling discovery to come out of this new field, the study of life's diversity and relatedness at the molecular level, is horizontal gene transfer (HGT) or the movement of genes across species lines. It turns out that HGT has been widespread and important; we now know that roughly eight percent of the human genome arrived sideways by viral infection, a type of HGT. In *The Tangled Tree*, the grandest tale in biology, David Quammen presents the science and the scientists involved with patience, candor, and flair. We learn about the major players such as Carl Woese, the most important little-known biologist of the twentieth century; Lynn Margulis, the notorious maverick whose wild ideas about mosaic creatures proved to be true; and Tsutomu Watanabe, who discovered that the scourge of antibiotic-resistant bacteria is a direct result of horizontal gene transfer, bringing the deep study of genome histories to bear on a global crisis in public health. David Quammen proves to be an immensely well-informed guide to a complex story. *The Wall Street Journal* In *The Tangled Tree*, he explains how molecular studies of evolution have brought startling recognitions about the tangled tree of life, including where we humans fit upon it. Thanks to new technologies, we now have the ability to alter even our genetic composition through sideways insertions, as nature has long been doing. *The Tangled Tree* is a source of wonder. Quammen has written a deep and daring intellectual adventure. *The Boston Globe*

Merleau-Ponty's Developmental Ontology David Morris, 2018-10-15 Winner of the 2020 Edward Goodwin Ballard Prize in Phenomenology, Merleau-Ponty's *Developmental Ontology* shows how the philosophy of Maurice Merleau-Ponty, from its very beginnings, seeks to find sense or meaning within nature and how this quest calls for and develops into a radically new ontology. David Morris first gives an illuminating analysis of sense, showing how it requires understanding nature as engendering new norms. He then presents innovative studies of Merleau-Ponty's *The Structure of Behavior* and *Phenomenology of Perception*, revealing how these early works are oriented by the problem of

sense and already lead to difficulties about nature temporality and ontology that preoccupy Merleau Ponty's later work Morris shows how resolving these difficulties requires seeking sense through its appearance in nature prior to experience ultimately leading to radically new concepts of nature time and philosophy Merleau Ponty's *Developmental Ontology* makes key issues in Merleau Ponty's philosophy clear and accessible to a broad audience while also advancing original philosophical conclusions

Creation Through Evolution Austriaco Op Nicanor Pier Giorgio, Nicanor Pier Giorgio Austriaco, 2024-11-29 Written and revised over the past three years *Creation through Evolution* contains ten new essays that directly respond to the most common philosophical and theological objections put forward by Catholics who are skeptical about evolutionary theory Significantly the authors use the conceptual framework of St Thomas Aquinas as a starting point to engage in the faith and science dialogue and they take the Catechism of the Catholic Church as their starting point The contributors believe that the solutions proposed by these essays to the disputed questions raised by skeptics are novel and robust The contents of the essays were presented at colloquia at the University of Oxford and Providence College and were revised in response to criticisms and comments raised by the other participants at these meetings The chapters were written to respond to Catholic skeptics of Darwinian evolution They are meant to be read not only by scholars but also by graduate and undergraduate students *Creation through Evolution* will be of interest to the informed Catholic reader who is struggling to reconcile evolutionary theory with the claims of the Catechism of the Catholic Church

Crafting Everyday Food Angela Ki Che Leung, Hallam Stevens, 2025-07-31 Focusing on East Asia from the nineteenth century to the present *Crafting Everyday Food* highlights the role of technology in transforming traditional foods into modern ones and in reinventing industrialized foods as heritage foods The seven expert researchers adopt a unique technological perspective to trace the transformation of traditional fermented foodstuffs typical of the region kimchi soy sauce kji and tea and the appropriation of new foods of nonlocal origin such as beef and potato into Asian diets The essays discuss how modern technologies reconstructed traditional or authentic foods showing how global flows of commodities experts and consumers as well as the circulation of knowledge and practices shaped the East Asian foodscape Weaving together science and technology studies with historical studies the volume generates innovative approaches to thinking about technological change everyday life and the foodways of East Asia as a region Understanding how these technological evolutions have transformed food production and consumption provides new insights into the complex processes of industrialization and the roles of taste and heritage in East Asian modernity Each chapter takes up a unique food item with its own complex past and traces gradual and at times dramatic change allowing new relationships to emerge between the creators consumers and their surrounding world Truly multidisciplinary in approach Leung and Stevens bring together scholars and methods from a range of fields into a coherent transnational dialogue resulting in an innovative way to define East Asia without relying on geographic or linguistic boundaries The study of everyday foods consumed by ordinary people on a day to day basis provides a productive perspective

for understanding East Asian cultures as sociotechnical systems pushing back the role of elite and special foods as privileged objects in the discipline of food studies
