

The results of Lenard and Milikan's experiment about photoelectric effect can be explained by Einstein's assumption. If we assume a photons energy as $h \cdot \nu$ (Planck constant multiplied by frequency of light), it should be absorbed by electrons on the metal plate and increase their kinetic energy for " $h \cdot \nu$ ". However, the electrons can not extract immediately because of the potential energy that binds them to the metal surface. So that, there should be enough energy to exceed a "threshold level" of energy to extract electrons from the surface.

To present in mathematical formulas:

$$E = h \cdot \nu$$

E = Energy of one photon (Joule or Electron-volt)

h = Planck constant (apx. $6.63 \times 10^{-34} \text{ j.s}$)³

ν = Frequency of light (Hz)

Kinetic energy pf photoelectrons is equal to energy of photons subtracted from potential energy between electrons and metal plate.

$$KE = h \cdot \nu - W$$

KE = Kinetic Energy

$h \cdot \nu$ = Energy of photon (Joule or Electron-volt)

W = Work function (The least required energy to extract electrons from metal surface, can be differ depend on type of metal.) (Joule or Electron-volt)

$$\nu_0 = W / h$$

ν_0 = Stopping Potential (e.V)

W = Work function (varies on type of metal)

h = Planck Constant (apx. $6.63 \times 10^{-34} \text{ j.s}$)³

In conclusion, there are three results that observed from the experiment and calculations:

*the frequency of the light needed to reach a particular minimum value (depending on the metal) for photoelectrons to start escaping the metal¹

*the maximum kinetic energy of the photoelectrons depended on the frequency of the light¹

*the potential energy that prevents extraction of electrons from metal surface is depend on type of metal plate

The Nature of Physical Computation

Oron Shagrir,2022 Computing systems are ubiquitous in contemporary life Even the brain is thought to be a computing system of sorts But what does it mean to say that a given organ or system computes What is it about laptops smartphones

and nervous systems that they are deemed to compute and why does it seldom occur to us to describe stomachs hurricanes rocks or chairs that way These questions are key to laying the conceptual foundations of computational sciences including computer science and engineering and the cognitive and neural sciences Oron Shagrir here provides an extended argument for the semantic view of computation which states that semantic properties are involved in the nature of computing systems The first part of the book provides general background Although different in scope these chapters have a common theme namely that the linkage between the mathematical theory of computability and the notion of physical computation is weak The second part of the book reviews existing non semantic accounts of physical computation Shagrir analyze three influential accounts in greater depth and argues that none of these accounts is satisfactory but each of them highlights certain key features of physical computation that he eventually adopts in his own semantic account of physical computation a view that rests on a phenomenon known as simultaneous implementation or indeterminacy of computation Shagrir completes the characterization of his account of computation and highlights the distinctive feature of computational explanations **20**

Idealism, Relativism, and Realism Dominik Finkelde, Paul M. Livingston, 2020-05-05 Several debates of the last years within the research field of contemporary realism known under titles such as New Realism Continental Realism or Speculative Materialism have shown that science is not systematically the

ultimate measure of truth and reality This does not mean that we should abandon the notions of truth or objectivity all together as has been posited repeatedly within certain currents of twentieth century philosophy However within the research field of contemporary realism the concept of objectivity itself has not been adequately refined What is objective is supposed to be true outside a subject's biases interpretations and opinions having truth conditions that are met by the way the world is The volume combines articles of internationally outstanding authors who have published on either Idealism Epistemic Relativism or Realism and often locate themselves within one of these divergent schools of thought As such the volume focuses on these traditions with the aim of clarifying what the concept objectivity nowadays stands for within contemporary ontology and epistemology beyond the analytic continental divide With articles from Jocelyn Benoist Ray Brassier G Anthony Bruno Dominik Finkelde Markus Gabriel Deborah Goldgaber Iain Hamilton Grant Graham Harman Johannes Heidegger Andrea Kern Anton F Koch Martin Kusch Paul M Livingston Paul Redding Sebastian Riedl Dieter Sturma
