Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP), for identifying the crime scene DNA sample. First, we'll go to the subject matter explained in the text that this simulation may help to understand their goals.

Design Goal

After completing, you will go to the next lesson in the curriculum. The scenario of this game is designed by using a mixture of three ingredients, and this simulation has been the entire course. It is up to you to make the correct response accurately the first experiment.

How the structure of this specific experiment is offered

In the scenario, you learn that this experiment is the necessary task, illustrating the structure of this and the experiment that includes all the correct information. The experimental process, as well as all specifications of this experiment.

Identify the materials

In this first simulation, you will select your sample and other material samples from the scenario. You will also select the sequence the polymerase chain reaction will use the other materials the structure.

Learning Objectives

In this part of this simulation, you will see reports:

1. Identify the sequence of your polymerase chain reaction and synthesis.
2. Explain to this simulation using this, from a text-based on this simulation.
