

Measures of population change are crude birth rate, crude death rate, and natural increase rate. **Crude birth rate** is the number of births per thousand individuals in a population per year. **Crude death rate** is the number of deaths per thousand individuals in a population per year.

14. Crude birth and death rates are calculated by dividing the number of births or deaths by the population size and multiplying by 1000. Write these out as formulae:

Crude birth rate =

Crude death rate =

Natural increase rate is the rate of human growth expressed as a percentage **change** per year.
Natural increase rate* = (Crude birth rate - crude death rate) / 10 (*migration is ignored)

15. Calculate the *population density*, *crude birth rate*, *crude death rate*, and *natural increase rate* from the data provided in Table 3 below and complete the table.

Table 3: Changes in Global Human Populations by Region
