rheological terms only Other lubricant characteristics are not considered The SAE J306 Standard defines the limits for a
classification of automotive gear lubricants in rheological terms This standard is intended for use by equipment
manufacturers in defining and recommending automotive gear axle and manual transmission lubricants In 1998 and 2005
SAE created new viscosity grades in SAE J306 to better balance fuel economy and durability In recent years there has been
greater focus on lower viscosity automotive gear lubricants to reduce churning power loss and improve operating efficiency
However the current SAE J306 specification does not adequately define future low viscosity fluids The newly revised SAE
J306 standard addresses this shortcoming by tightening the broad kinematic viscosity window of SAE 80 grade as well as
adding kinematic viscosity ranges for fluids below 7 cSt currently SAE 80 lower limit Ultimately this standard will enable a
more precise classification of automotive gear oil products as innovation continues in this space *Axle and Manual*
