I would like to express my gratitude to Professor Collins and Jane Arden (Lab Technician at XYZ State University) for their guidance, academic encouragement, and friendly critique. Their attitude and care have helped me to complete this research project on time. I would also like to thank Dr. King for her advice and cooperation as she helped me to access information from relevant university departments. The contribution of Mr. Bean to this project cannot be underestimated as his humor and analytical work have helped me to calculate the financial part and estimate available resources.

I would also like to extend my thanks to XYZ Systems for their tuning of the technical equipment and their skills in running the XYZ systems.

Finally, I would like to thank my family for their support and care throughout my research work.

Guest,2023-06-28 The COVID 19 pandemic caused by the SARS CoV 2 virus has affected nearly every country and territory in the world Although worldwide vaccination efforts have reduced the risk of serious disease outcomes disparities in distribution have led to multiple waves of SARS CoV 2 outbreaks and the emergence of variants of concern some of which have enhanced infectivity and ability to evade existing vaccines Hence there is an increasing interest in understanding the evolution of viruses like SARS CoV 2 as well as improving our capacity to effectively current and manage future pandemics This new volume reviews the most effective omic techniques for increasing our understanding of COVID 19 to improve diagnostics prognostics and genomic surveillance and to facilitate development of effective treatments and vaccines Chapters are written by an international team of experts and explore methods in the areas of genomics transcriptomics proteomics and metabolomics Techniques used to assess physiological function at the molecular level and artificial intelligence approaches used for more effective validation and translation of biomarker candidates into clinical use are also discussed This book is an excellent resource for researchers studying biomarkers virology metabolic diseases and infectious diseases as well as clinical scientists physicians drug company scientists and healthcare workers

Advanced x-ray multilayer waveguide optics Qi Zhong,2017 The aim of this thesis was to design novel waveguide structures and to analyze them in view of complex phenomena of near field propagation For this purpose experimental far field measurements were used in combination with finite difference simulations and phase retrieval methods Two novel structures have been designed fabricated and characterized the waveguide array WGA yielding several waveguided beams in transmission and multi guide resonate beam couplers RBCs tailored to yield two or several reflected beams Two novel structures have been designed fabricated and characterized the WGA yielding several waveguided beams in transmission and multi guide RBCs tailored to yield two or several reflected beams The WGA and the multi guide RBCs are not only distinct in the coupling geometry A major difference is related to the fact that the WGA principle is based on the separation non coupling of the different transmitted wavelets while the RBC functions are based on a strong coupling of guided radiation in several layers

Electrical Properties of Indium Arsenide Nanowires and Their Field-Effect Transistors Mengqi Fu, 2018-11-29 This book explores the impacts of important material parameters on the electrical properties of indium arsenide InAs nanowires which offer a promising channel material for low power electronic devices due to their small bandgap and high electron mobility Smaller diameter nanowires are needed in order to scale down electronic devices and improve their performance However to date the properties of thin InAs nanowires and their sensitivity to various factors were not known The book presents the first study of ultrathin InAs nanowires with diameters below 10 nm are studied for the first time establishing the channel in field effect transistors FETs and the correlation between nanowire diameter and device performance Moreover it develops a novel method for directly correlating the atomic level structure with the properties of individual nanowires and their device performance Using this method the electronic properties of InAs nanowires and the performance of the FETs they are used in are found to change with the crystal phases wurtzite zinc blend or a mix phase the axis direction and the growth method These findings deepen our understanding of InAs nanowires and provide a potential way to tailor device performance by controlling the relevant parameters of the nanowires and devices *Beijing International Conference on High Temperature Superconductivity* Z.
