- [Response] is the study of biological inheritance patterns and variation in organisms.
- [Response] involves the fusion of two gametes that results in offspring that are a genetic mixture of both parents, and the actual fusion of an egg and sperm cell is called [Response].
- The male gamete called the [Response] is much smaller than the female gamete called the [Response].
- The two major groups of cell types in the human body are called [Response] and [Response].
- The exchange of chromosome segments between homologous chromosomes is called [Response].
- The tendency for two genes that are located close together on a chromosome to be inherited together is called [Response].
- [Response] cells have two copies of each chromosome versus [Response] cells have only one copy.
- A(n) [Response] is a piece of DNA that provides a set of instructions to a cell to make a certain protein. On the other hand, a(n) [Response] is any of the alternative forms that may occur at a specific locus.
- The grid system for predicting all possible genotypes resulting from a cross is called [Response].
- Mendel's first law of genetics [Response] demonstrates that traits are inherited as discrete units which explains why individual traits persist without being blended or diluted over successive generations. His second law of genetics [Response] states that allele pairs separate independently of each other during meiosis.
