Bioinformatics and Computational Biology Solutions Using R and Bioconductor Robert Gentleman, Vincent Carey, Wolfgang Huber, Rafael Irizarry, Sandrine Dudoit, 2005-12-29 Bioconductor is a widely used open source and open development software project for the analysis and comprehension of data arising from high throughput experimentation in genomics and molecular biology Bioconductor is rooted in the open source statistical computing environment R This volume s coverage is broad and ranges across most of the key capabilities of the Bioconductor project including importation and preprocessing of high throughput data from microarray proteomic and flow cytometry platforms Curation and delivery of biological metadata for use in statistical modeling and interpretation Statistical analysis of high throughput data including machine learning and visualization Modeling and visualization of graphs and networks The developers of the software who are in many cases leading academic researchers jointly authored chapters All methods are illustrated with publicly available data and a major section of the book is devoted to exposition of fully worked case studies This book is more than a static collection of descriptive text figures and code examples that were run by the authors to produce the text it is a dynamic document Code underlying all of the computations that are shown is made available on a companion website and readers can reproduce every number figure and table on their own computers

Advanced Solutions in Power Systems Mircea Eremia, Chen-Ching Liu, Abdel-Aty Edris, 2016-08-31 Provides insight on both classical means and new trends in the application of power electronic and artificial intelligence techniques in power system operation and control This book presents advanced solutions for power system controllability improvement transmission capability enhancement and operation planning The book is organized into three parts The first part describes the CSC HVDC and VSC HVDC technologies the second part presents the FACTS devices and the third part refers to the artificial intelligence techniques All technologies and tools approached in this book are essential for power system development to comply with the smart grid requirements Discusses detailed operating principles and diagrams theory of modeling control strategies and physical installations around the world of HVDC and FACTS systems Covers a wide range of Artificial Intelligence techniques that are successfully applied for many power system problems from planning and monitoring to operation and control Each chapter is carefully edited with drawings and illustrations that helps the reader to easily understand the principles of operation or application Advanced Solutions in Power Systems HVDC FACTS and Artificial Intelligence is written for graduate students researchers in transmission and distribution networks and power system operation This book also serves as a reference for professional software developers and practicing engineers

New Solutions for an Old Challenge Ronny Merkel, 2014 In criminal investigations latent fingerprints are often considered as reliable means of identifying suspects However the evidential value of a print is strongly dependent on the knowledge of its age the time which has passed since deposition Suspects might admit their previous presence at a crime scene but often claim to have been there prior to or after the crime

Especially in regard to public or highly frequented crime scenes prints might lose their evidential value in this case potentially leading to dropped charges Despite its high relevance the challenge of estimating a latent print s age could not be adequately addressed for 80 years In this thesis non invasive high resolution capturing devices are for the first time applied to the age estimation challenge replacing classical physical or chemical print development techniques They allow to capture a single print in regular time intervals and to systematically study its degradation behavior Introducing automated processing methods in the form of a digital pipeline including preprocessing feature extraction and age estimation techniques objective age estimates are presented for the first time in this field Maximum classification performances of different capturing devices between 76% and 86% are achieved for two class problems Furthermore a qualitative influence model on the aging speed of latent prints is designed forming a prerequisite for future studies

Theory and Practice of Cryptography Solutions for Secure Information Systems
