Database End-user, 1986 Engineered immune cells in cancer immunotherapy (EICCI) Cristina Maccalli, Axel Schambach, Francisco Martin, Cameron Turtle, 2023-02-28 **The Digest of the Decisions of the Courts of Ohio from the Earliest Period to September 1st, 1913** William Herbert Page, 1918 **Successes and Challenges of NK Immunotherapy** Benjamin Bonavida, Anahid Jewett, 2021-06-23

Successes and Challenges of NK Immunotherapy Increasing Anti tumor Efficacy describes the unique therapeutic applications of NK cells to fight cancers and eliminate the bulk and subset of cancer stem cells responsible for metastasis relapse and recurrences The book provides information on the development engineering mechanisms of action response to various preclinical models and applications in various clinical trials Sections cover the development of highly engineered cytotoxic NK cells their mechanisms of action preclinical and clinical applications the development and application of CAR NK cells and new NK drug conjugates also emphasizing that activated NK cells can target and kill highly resistant cancer stem cells Written by the leading experts on NK immunotherapy worldwide this is a valuable resource for researchers clinicians and members of the biomedical field who are interested in understanding novel and efficient therapies to fight cancers Discusses the unique developmental applications of NK immunotherapy against cancers which differs greatly from other types of immunotherapies Provides up to date and highly relevant information through chapters written by the leading researchers in the field Presents a significant number of schematic diagrams for easy understanding and reproducibility

Tailoring NK Cell Receptor-Ligand Interactions: an Art in Evolution, 2nd Edition Ulrike Koehl, Antoine Toubert, Gianfranco Pittari, 2018-11-13

Recognition and killing of aberrant infected or tumor targets by Natural Killer NK cells is mediated by positive signals transduced by activating receptors upon engagement of ligands on target surface These stimulatory pathways are counterbalanced by inhibitory receptors that raise NK cell activation threshold through negative antagonist signals While regulatory effects are necessary for physiologic control of autoimmune aggression they may restrain the ability of NK cells to activate against disease Overcoming this barrier to immune surveillance multiple approaches to enhance NK mediated responses are being investigated since two decades Propelled by considerable advances in the understanding of NK cell biology these studies are critical for effective translation of NK based immunotherapy principles into the clinic In humans dominant inhibitory signals are transduced by Killer Immunoglobulin Like Receptors KIR recognizing cognate HLA class I on target cells Conversely KIR recognition of missing self HLA due to HLA loss or HLA KIR mismatch triggers NK mediated tumor rejection Initially observed in murine transplant models these antitumor effects were later found to have important implications for the clinical outcome of haplotype mismatched stemcell transplantation Here donor NK subsets protect against acute myeloid leukemia AML relapse through missing self recognition of donor HLA C allele groups C1 or C2 and or Bw4 epitope These studies were subsequently extended by trials investigating the antileukemia effects of adoptively transferred haplotype mismatched NK cells in non

transplant settings Other mechanisms have been found to induce clinically relevant NK cell alloreactivity in transplantation e g post reconstitution functional reversal of anergic NK cells More recently activating KIR came into the spotlight for their potential ability to directly activate donor NK cells through in vivo recognition of HLA or other ligands Novel therapeutic monoclonal antibodies mAb may optimize NK mediated effects Examples include obinutuzumab GA101 a glyco engineered anti CD20 mAb with increased affinity for the Fc RIIIA receptor enhancing antibody dependent cellular cytotoxicity lirilumab IPH2102 a first in class NK specific checkpoint inhibitor blocking the interaction between the major KIR and cognate HLA C antigens and elotuzumab HuLuc63 a humanized monoclonal antibody specific for SLAMF7 whose anti myeloma therapeutic effects are partly due to direct activation of SLAMF7 expressing NK cells In addition to conventional antibodies NK cell targeted bispecific BiKEs and trispecific TriKEs killer engagers have also been developed These proteins elicit potent effector functions by binding target ligands e g CD19 CD22 CD30 CD133 HLA class II EGFR on one arm and NK receptors on the other An additional innovative approach to direct NK cell activity is genetic reprogramming with chimeric antigen receptors CAR To date primary NK cells and the NK92 cell line have been engineered with CAR specific for antigens expressed on multiple tumors Encouraging preclinical results warrant further development of this approach This Research Topic welcomes contributions addressing mechanisms of NK mediated activation in response to disease as well as past and contemporary strategies to enhance NK mediated reactivity through control of the interactions between NK receptors and their ligands

Gene Therapy in Neurological Disorders Mingjie Li,B. Joy Snider,2018-05-25 Gene therapy has tremendous potential for the treatment of neurological disorders There has been substantial progress in the development of gene therapy strategies for neurological disorders over the last two decades Gene Therapy in Neurological Disorders thoroughly reviews currently available gene therapy tools and presents examples of their application in a variety of neurological diseases The book begins with general reviews of gene therapy strategies with a focus on neurological disorders The remainder of the chapters present approaches to specific neurological disorders Each chapter gives an in depth introduction to the relevant field before diving into the specific tool or application The book aims to help investigators students and research staff better understand the principles of gene therapy and its application in the nervous system Provides background information and experimental details of gene therapy tools applied for neuroscience research and neurological disorders Covers a broad range of gene delivery and regulation tools therapeutic agents and target cells including emerging new technologies such as CRISPR Cas9 genome editing Discusses applications of gene therapy tools to neurological disorders including neurodegeneration muscular dystrophy trauma and chronic pain and neoplastic diseases **Approaches to Illustrate the Tumor Immune Microenvironment** Suhendan Ekmekcioglu,Sammy Ferri-Borgogno,Jared Burks ,Paola Cappello,2025-10-13 The field of tumor immunology has made significant strides in understanding the complex interactions between tumor cells and the immune system which are crucial for cancer development progression and response to therapy

The discovery and therapeutic targeting of immune checkpoints have revolutionized cancer treatment offering new hope for patients with various malignancies Over the past decade our comprehension of the tumor immune microenvironment has expanded significantly revealing the intricate mechanisms that govern treatment responses and the prognostic value of immune cell compositions in different cancer models Recent advancements in multiplex profiling platforms have enabled researchers to capture detailed tumor architecture and spatial information providing a deeper understanding of the role of molecular biomarkers in cancer treatment Despite these advancements there remains a need to further explore the dynamics of tumor stromal and immune cell interactions to design novel strategies targeting the tumor immune microenvironment and its communication pathways
