Embedded Computer Systems: Architectures, Modeling, and Simulation Timo D. Härmäläinen, Andy D. Pimentel, Jarmo Takala, Stamatis Vassiliadis, 2005-07-11 The SAMOS workshop is an international gathering of highly qualified researchers from academia and industry sharing in a 3 day lively discussion on the quiet and inspiring northern mountainside of the Mediterranean island of Samos As a tradition the workshop features workshop presentations in the morning while after lunch all kinds of informal discussions and nut cracking gatherings take place The

workshop is unique in the sense that not only solved research problems are presented and discussed but also partly unsolved problems and in depth topical reviews can be unleashed in the scientific arena. Consequently the workshop provides the participants with an environment where collaboration rather than competition is fostered. The earlier workshops SAMOS I-IV 2001-2004 were composed only of invited presentations. Due to increasing expressions of interest in the workshop the Program Committee of SAMOS V decided to open the workshop for all submissions. As a result the SAMOS workshop gained an immediate popularity: a total of 114 submitted papers were received for evaluation. The papers came from 24 countries and regions: Austria 1, Belgium 2, Brazil 5, Canada 4, China 12, Cyprus 2, Czech Republic 1, Finland 15, France 6, Germany 8, Greece 5, Hong Kong 2, India 2, Iran 1, Korea 24, The Netherlands 7, Pakistan 1, Poland 2, Spain 2, Sweden 2, Taiwan 1, Turkey 2, UK 2, and USA 5. We are grateful to all of the authors who submitted papers to the workshop.

The Informatics Handbook S.A. Fister, 2012-12-06. This is not a dictionary and nor is it an encyclopedia. It is a reference and compendium of useful information about the converging worlds of computers, communications, telecommunications, and broadcasting. You could refer to it as a guide for the Information Super Highway but this would be pretentious. It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues. Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions. Many of the words we use today in computing and communications only vaguely reflect their originations. And with such rapid change older terms are often taken, twisted, inverted, and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless. The information here is descriptive. I am concerned with usage only. This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines, newspapers, the Internet, forums, etc. This is the living language as it is being used today, not a historical artifact of 1950s computer science.
